Peer investment risk benchmark

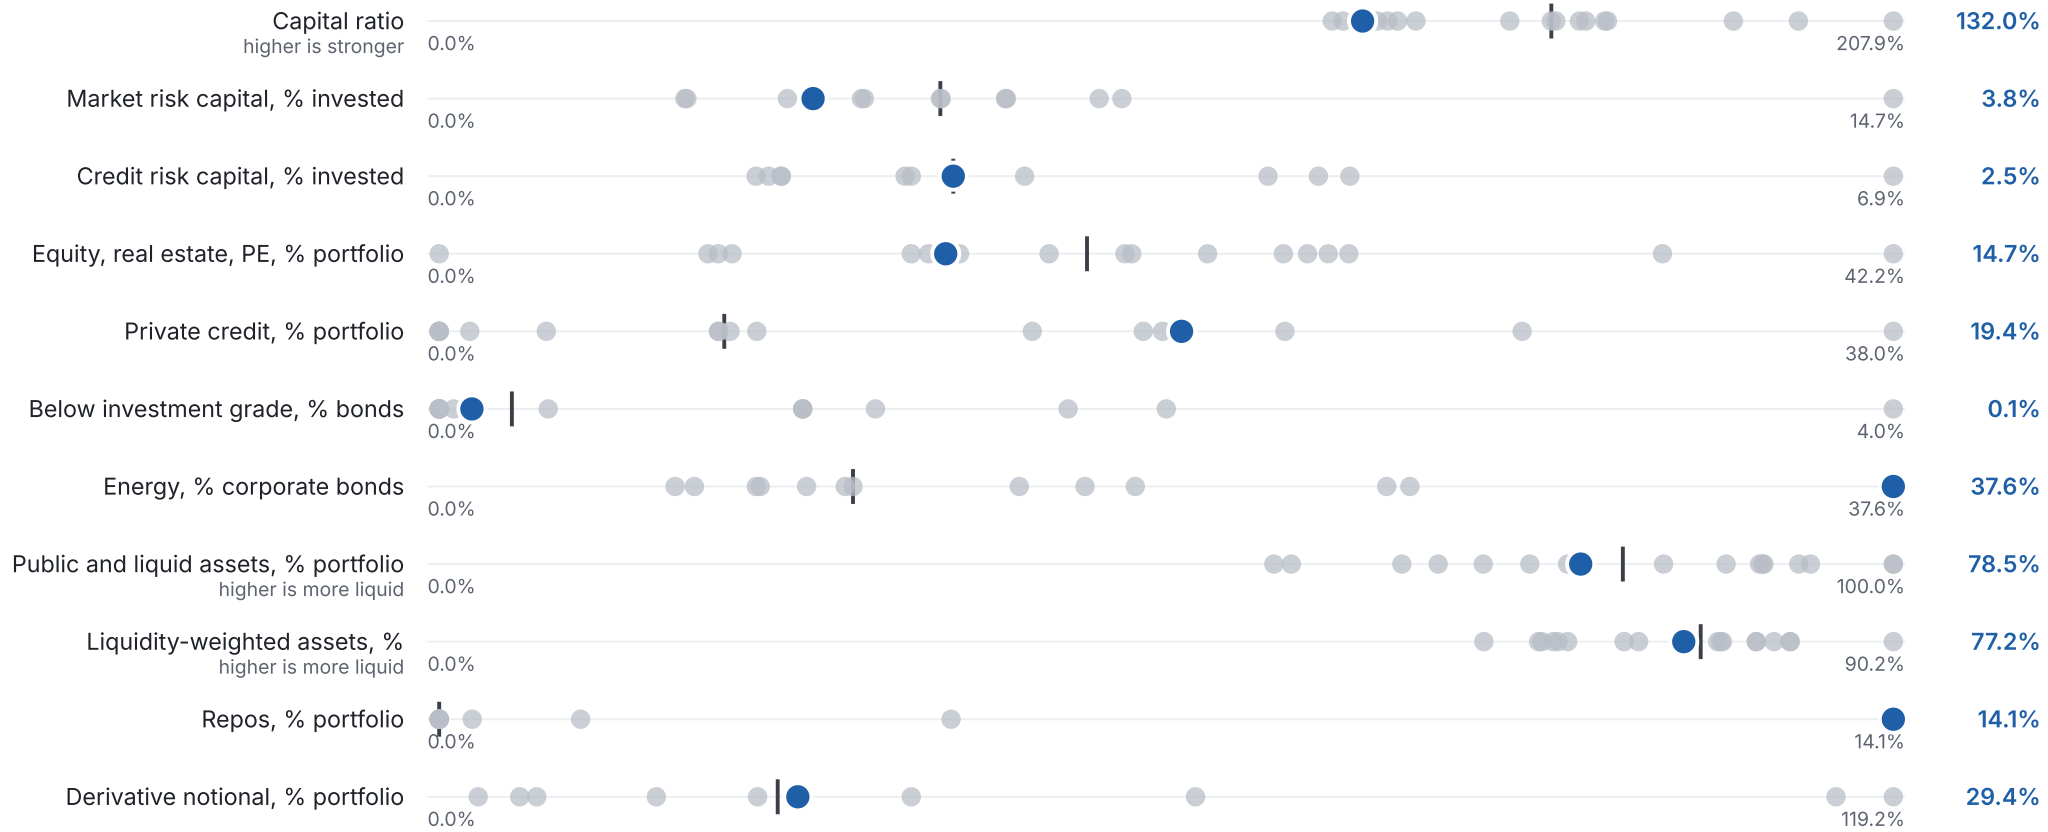

RBC Life holds LICAT market risk capital of **3.79**% of invested assets against a peer median of **5.08**%, and credit risk capital of **2.45**% (median **2.45**%). Its bonds are almost all investment grade, but **37.6**% of its corporate bonds are energy issuers (peer median **10.7**%), and repos fund **14.1**% of its portfolio, rank **1** of **10** peers. RBC Life publishes no market sensitivities, so those charts compare the peers that do.

Framework: market, credit and liquidity risk as set out in R. Doff, "Investment risks: market, credit and liquidity risk" (Risk Management for Insurers, Risk.net). Sensitivities and rating splits are as disclosed at 31 December 2025 (31 October 2025 for RBC Life and BMO Life). Regulatory measures come from OSFI LICAT and life returns for fiscal 2025 Q4, legal-entity basis. Liquidity tiers use each peer's latest general-account mix. RBC Life is highlighted throughout.

Overview

Where RBC Life sits on each metric

Each row is one metric on its own scale. Grey dots are the other peers, the tick is the peer median, and the coloured dot is RBC Life. Hover a dot for the insurer and value.

All metrics by insurer

Ordered by general-account size. Blank cells are not published or not in regulatory data. Capital ratio is LICAT total ratio for OSFI filers (fiscal 2025 Q4) and the latest published CARLI or solvency ratio for the others. Sensitivities are after-tax net income impact in basis points of invested assets unless the Market risk tab notes otherwise.

Market risk

Earnings at risk on a C$25Bn portfolio

Rates (worse of ±50 bp) · Credit spreads +50 bp · Public equity −10% · Real estate and alternatives −10% · Your earnings-risk limit, pro-rated from C$28Bn to C$25Bn

Each peer's disclosed net income loss under each shock, divided by its invested assets and multiplied by C$25Bn, then added up. The total is undiversified: shocks are applied one at a time and summed, and a shock that produces a gain counts as zero rather than offsetting the others. Bars with fewer than four parts mean the peer does not disclose that factor. Empire Life and Wawanesa Life report profit or loss without saying whether it is after tax, and Foresters Life's figures are pre-tax and derived from its notes; the rest are after tax. Hover a bar for the split.

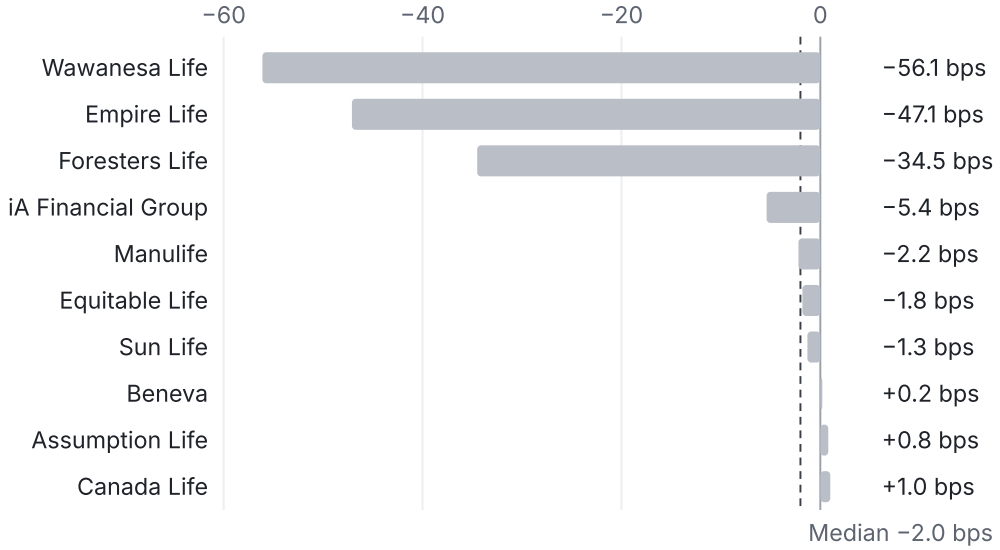

Disclosed market sensitivities

Immediate impact on net income as each insurer discloses it, divided by its invested assets (1 bp of a C$10Bn portfolio is C$1MM). Group-level figures for Manulife, Sun Life, Great-West Lifeco (shown as Canada Life) and iA. Where a peer disclosed a different shock (Beneva and Desjardins equity at −15%, several rate shocks at ±100 bp) the figure is scaled linearly and flagged in the tooltip. Desjardins publishes no invested-asset base for its life company, so it appears only in the table below.

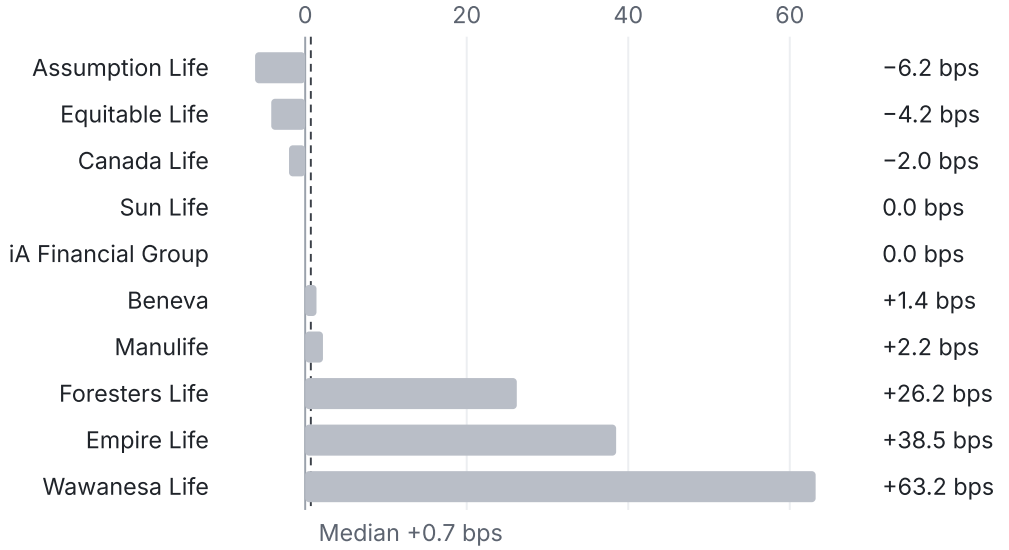

Earnings impact, bps of invested assets

Rates +50 bp

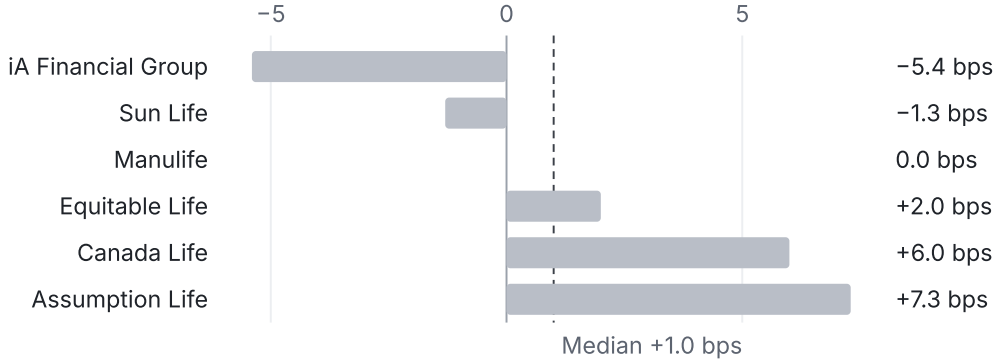

Not disclosed for this shock: **RBC Life**, BMO Life, ivari, Co-operators Life, UV Insurance, Canadian Premier Life, Primerica Life, Humania, Canada Protection Plan

Rates −50 bp

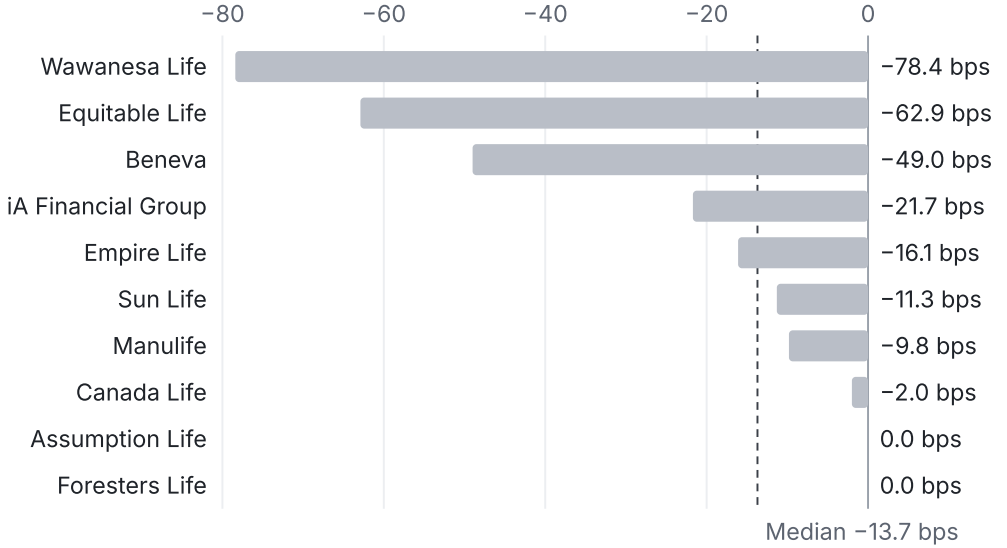

Not disclosed for this shock: **RBC Life**, BMO Life, ivari, Co-operators Life, UV Insurance, Canadian Premier Life, Primerica Life, Humania, Canada Protection Plan

Credit spreads +50 bp

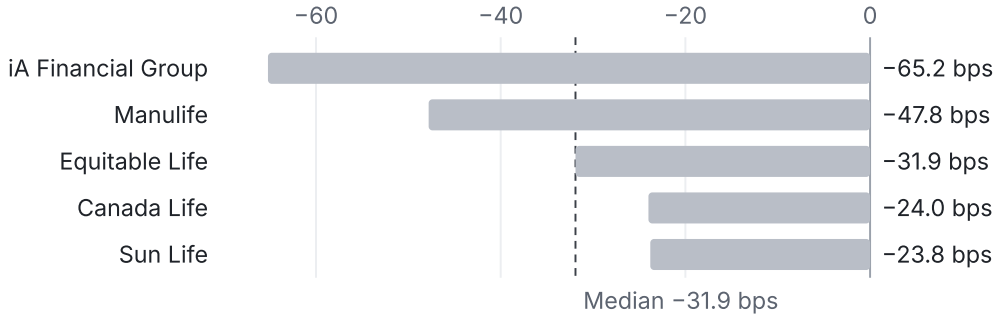

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Empire Life, Co-operators Life, UV Insurance, Wawanesa Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

Public equity −10%

Not disclosed for this shock: **RBC Life**, BMO Life, ivari, Co-operators Life, UV Insurance, Canadian Premier Life, Primerica Life, Humania, Canada Protection Plan

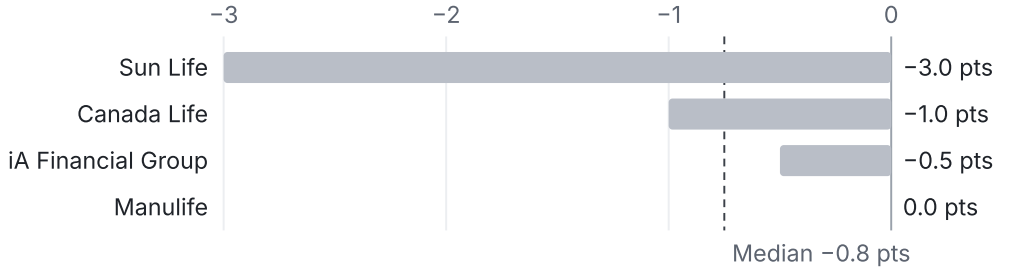

Real estate and alternatives −10%

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Empire Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Canada Protection Plan

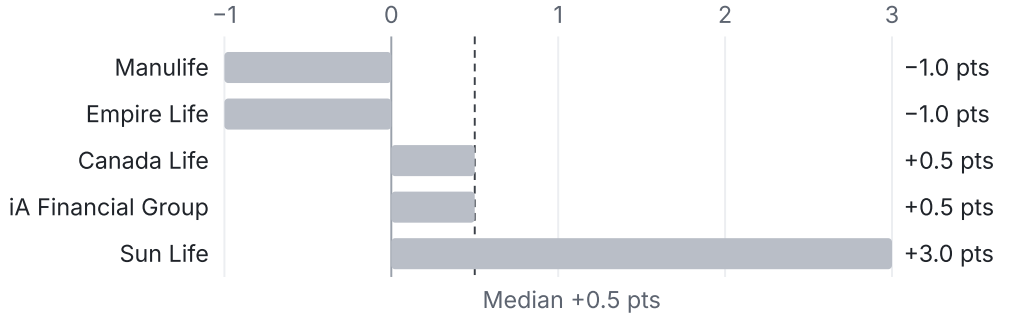

Capital ratio impact, points

Rates +50 bp

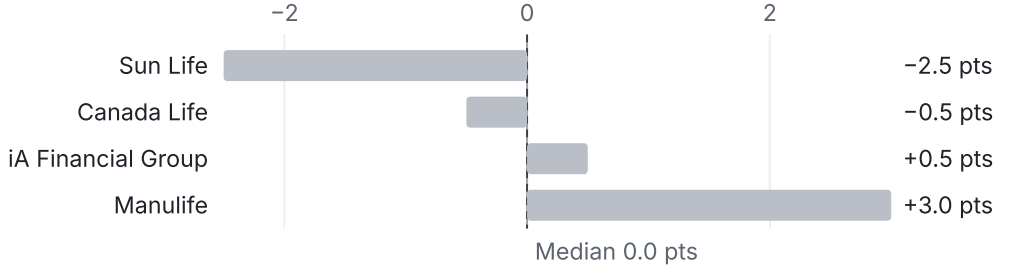

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Empire Life, Equitable Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

Rates −50 bp

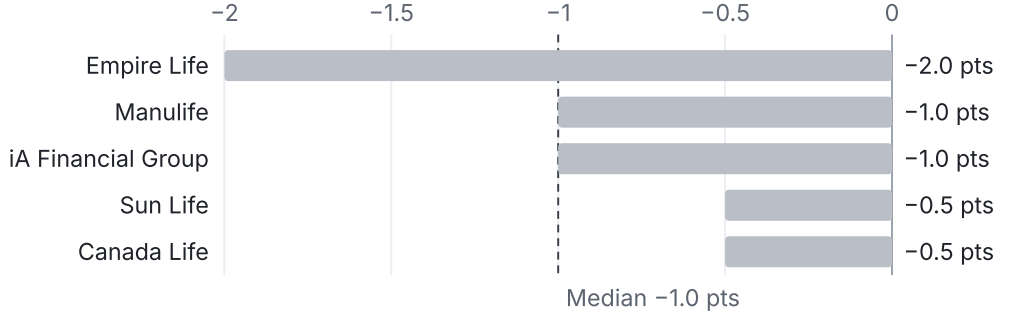

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Equitable Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

Credit spreads +50 bp

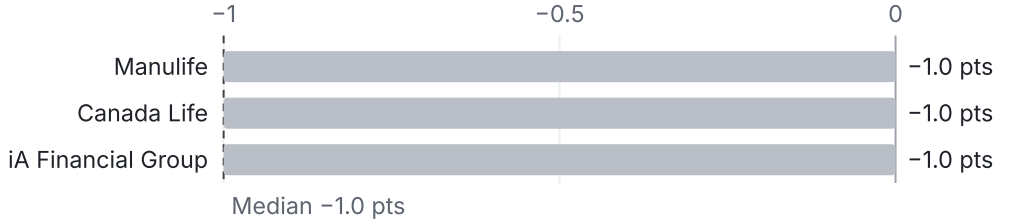

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Empire Life, Equitable Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

Public equity −10%

Not disclosed for this shock: **RBC Life**, BMO Life, Beneva, ivari, Equitable Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

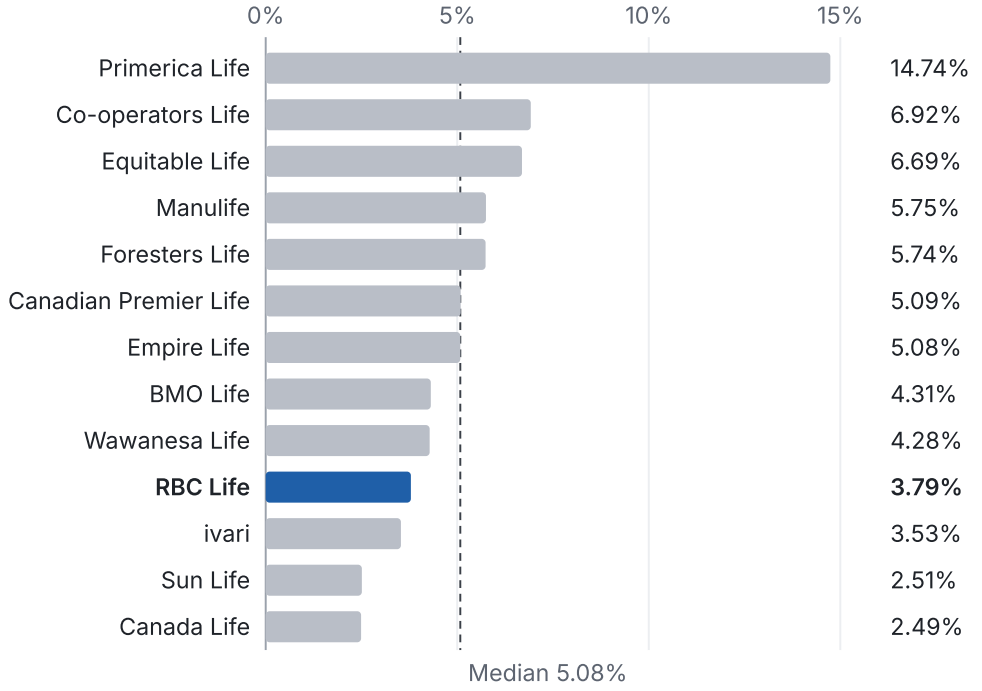

Real estate and alternatives −10%

Not disclosed for this shock: Sun Life, **RBC Life**, BMO Life, Beneva, ivari, Empire Life, Equitable Life, Co-operators Life, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance, Canada Protection Plan

LICAT market risk capital

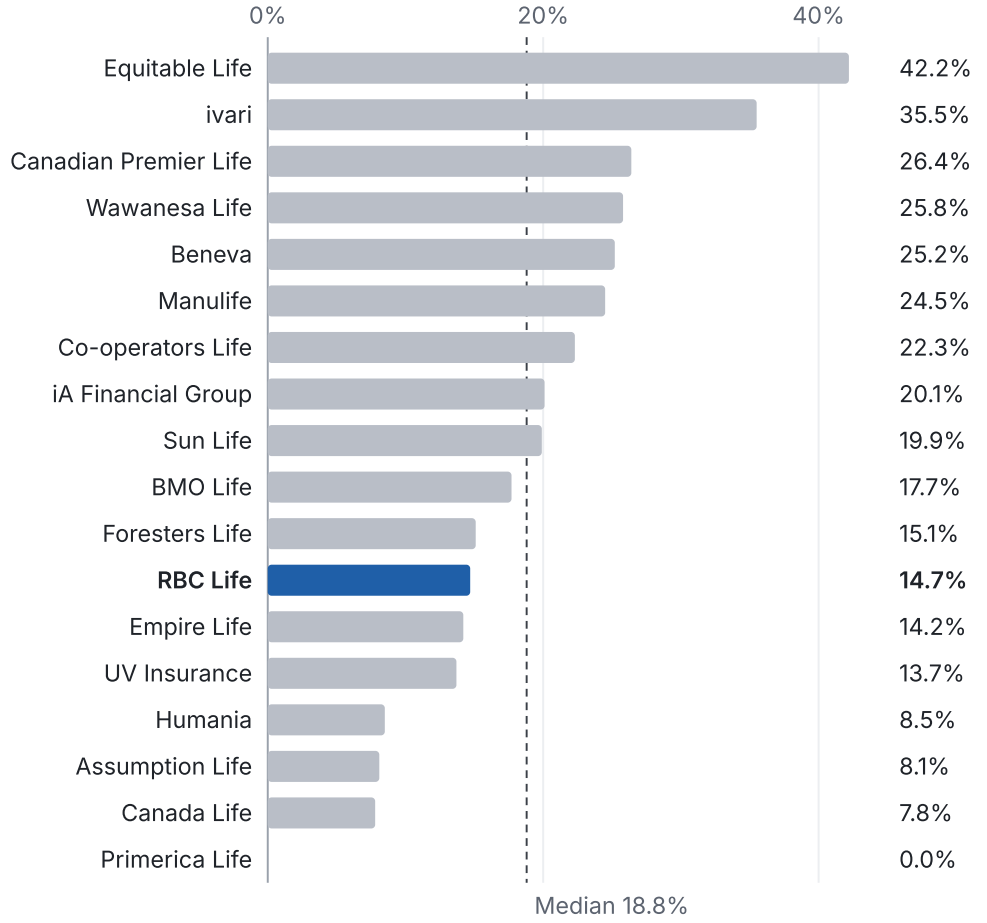

Market risk requirement for non-participating products as a share of invested assets, OSFI LCQ fiscal 2025 Q4. It captures interest rate, equity, real estate and currency risk under the regulator's standard shocks, so it is the one market risk measure every OSFI filer reports on the same basis.

No figure: iA Financial Group, Beneva, UV Insurance, Assumption Life, Humania, Desjardins Insurance

Public equity, real estate and private equity

Share of the latest general-account portfolio in common and preferred shares, real estate, infrastructure equity and other private equity (portfolio composition work). These are the assets behind the equity and alternatives shocks.

No figure: Desjardins Insurance

Sensitivity disclosures as published

Credit risk

LICAT credit risk capital

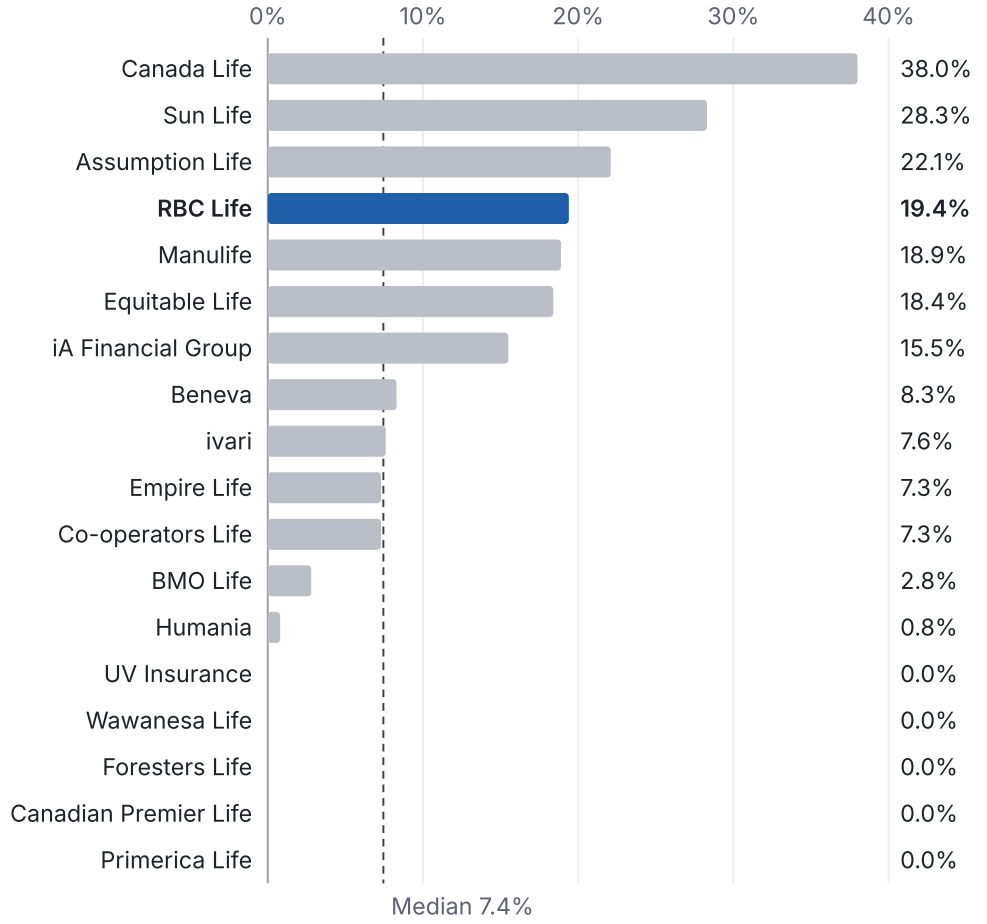

Credit risk requirement (default and migration on assets, non-participating products) as a share of invested assets, OSFI LCQ fiscal 2025 Q4.

No figure: iA Financial Group, Beneva, UV Insurance, Assumption Life, Humania, Desjardins Insurance

Private credit and mortgages

Share of the latest general-account portfolio in commercial mortgages, private placements, private loans and other private debt. These carry more default and loss-given-default uncertainty than public bonds and are also less liquid.

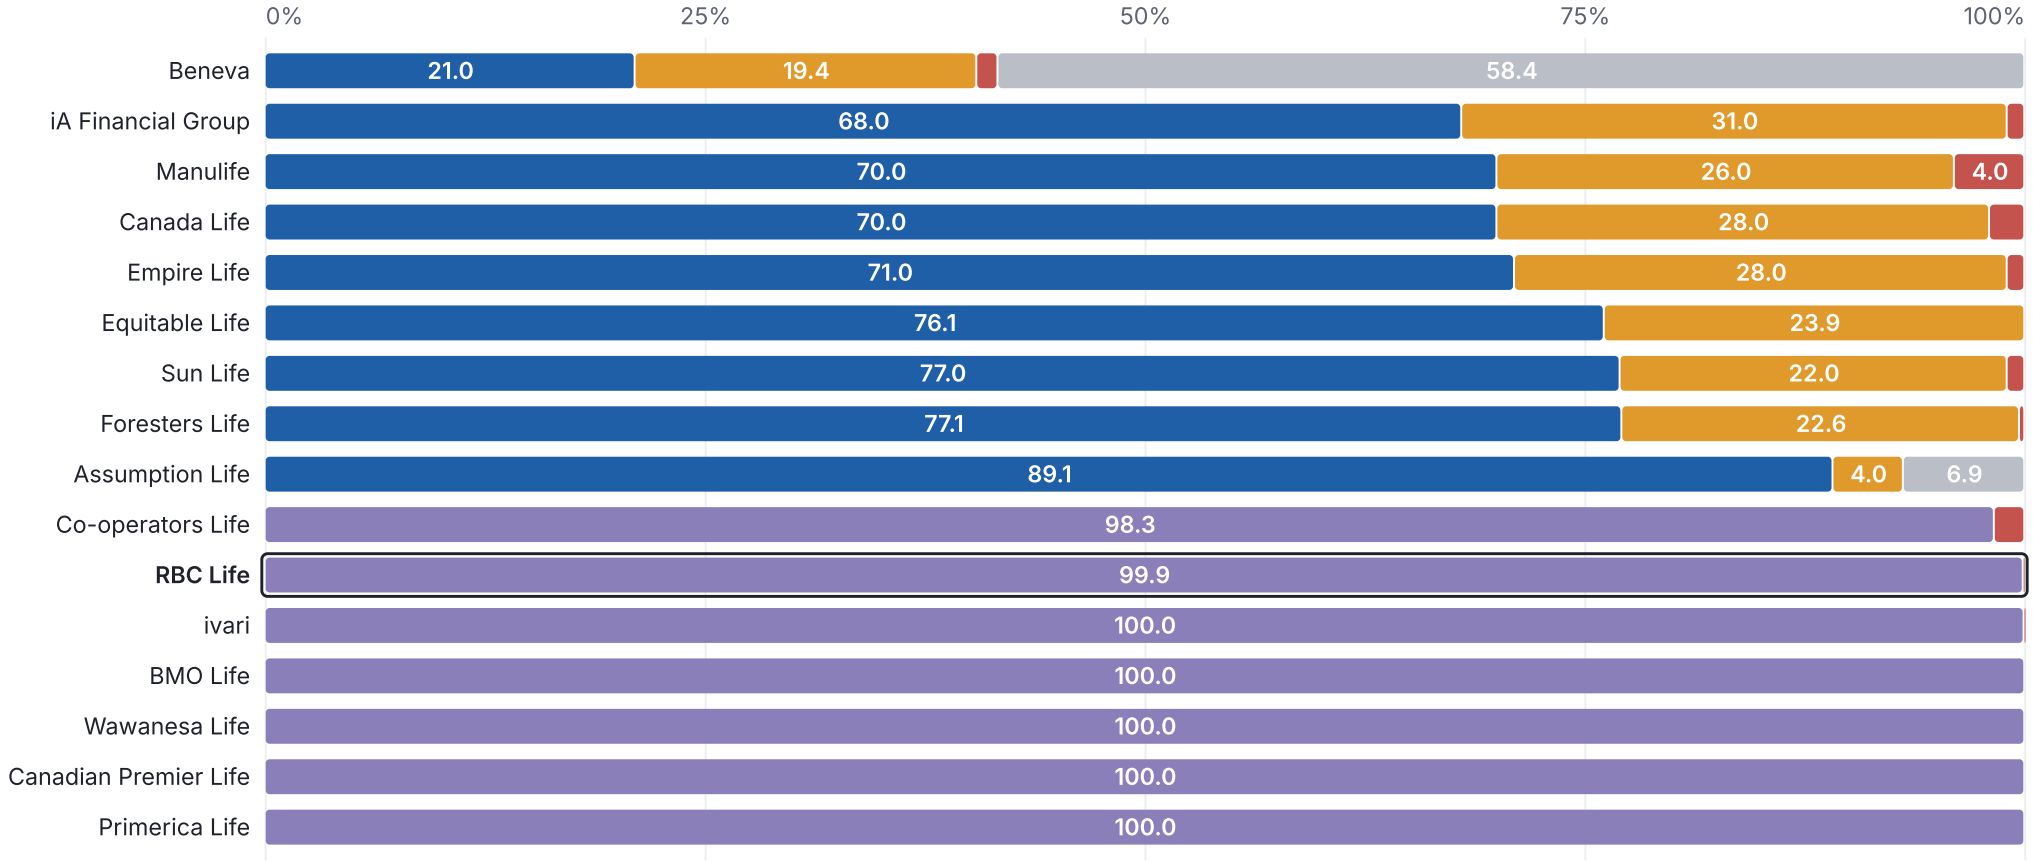

No figure: Desjardins Insurance

Bond portfolio by credit rating

A or higher · BBB · Below investment grade · Unrated or government not rated · Investment grade, split not published (OSFI)

Peers that publish a rating table are shown with their split as at YE2025; for other OSFI filers only the investment-grade versus below-investment-grade split is available from the OSFI return. Beneva's note does not rate its government bonds (53% of bonds). Co-operators Life's parent group report covers the P&C company, so it is not used.

Corporate bond sector concentration

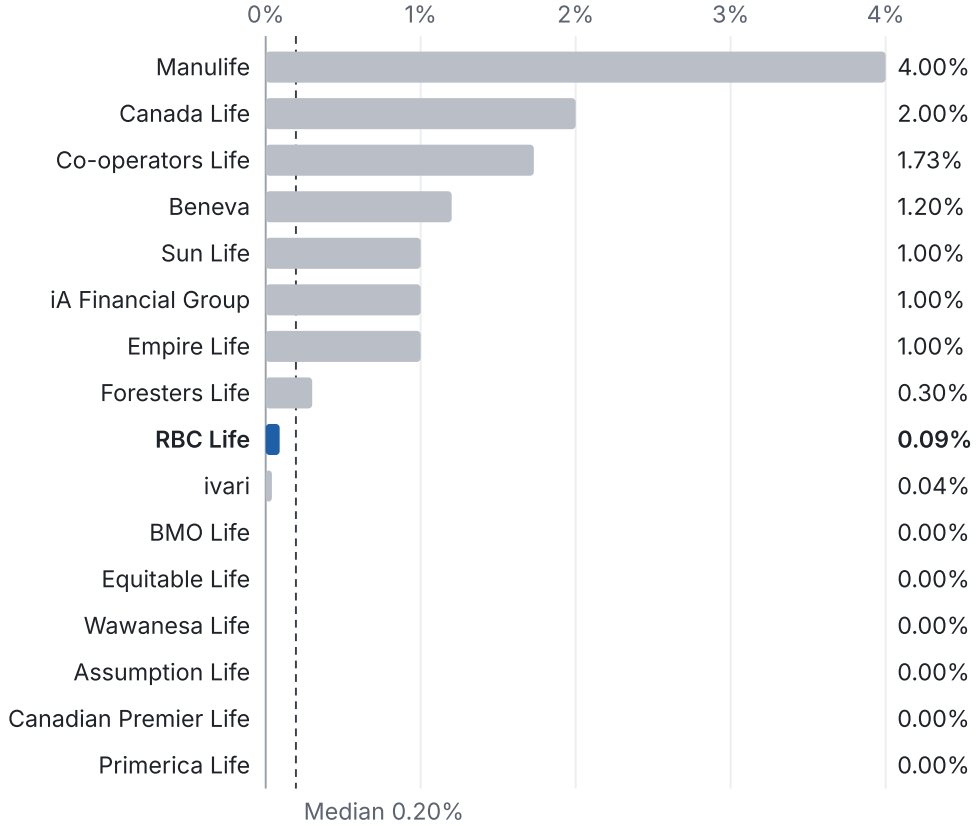

Corporate bonds by issuer sector as a share of each OSFI filer's total, OSFI LF3 fiscal 2025. Darker cells are larger shares. Sector coding is the insurer's own, so pipelines and power producers may sit in Energy for one insurer and Utilities for another.

	Energy	Materials	Industrials	Consumer discretionary	Consumer staples	Health care	Financials	Technology	Communications	Utilities	Other
Manulife	10	4	14	6	14	0	22	2	2	26	2
Canada Life	7	6	2	5	4	4	19	3	4	30	18

Sun Life	6	2	14	3	3	6	25	2	5	17	19
RBC Life	38	0	2	2	0	7	16	3	5	0	28
BMO Life	15	0	8	6	6	2	14	1	9	33	7
ivari	17	0	11	1	17	0	12	0	19	22	2
Empire Life	18	0	4	0	4	3	36	1	7	16	11
Equitable Life	25	0	7	3	0	0	42	0	6	0	18
Co-operators Life	25	0	7	0	0	1	27	0	9	13	18
Wawanesa Life	11	0	9	3	4	0	35	0	5	34	0
Foresters Life	8	0	5	2	1	2	54	0	5	23	0
Canadian Premier Life	8	0	1	2	6	0	54	0	6	10	12
Primerica Life	11	0	9	14	10	0	37	0	10	10	0

Below-investment-grade bonds

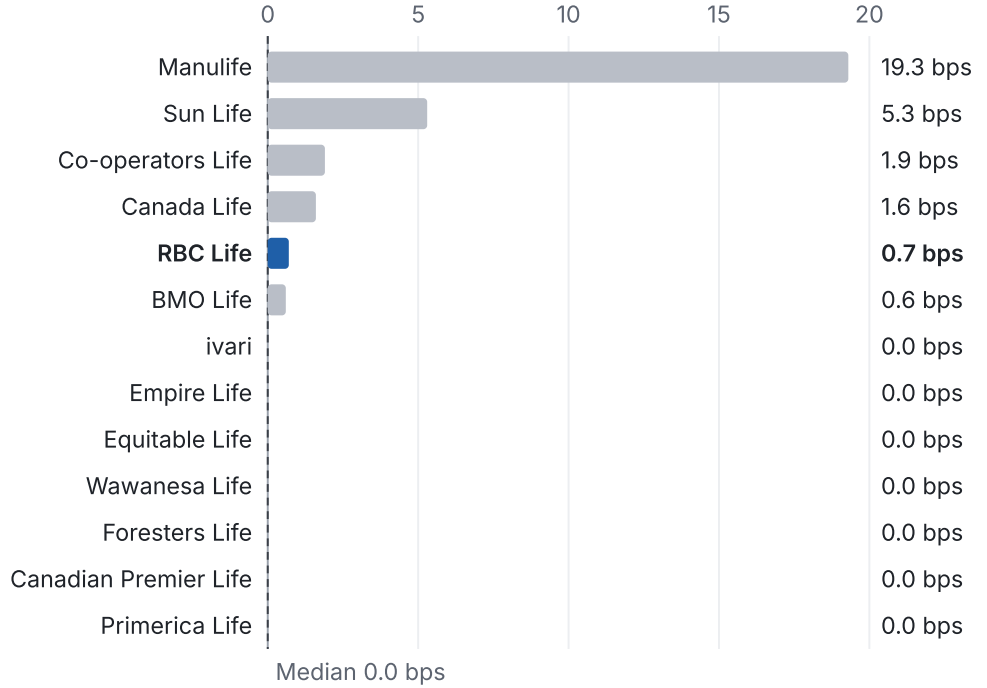

Share of bonds rated below BBB−, from the disclosed rating table where there is one and the OSFI return otherwise.

No figure: UV Insurance, Humania, Desjardins Insurance

Credit loss allowances

Expected credit loss provisions (stages 1 to 3) on invested assets, basis points, OSFI LF2 fiscal 2025 Q4. Problem mortgages (delinquent, restructured or impaired) are in the table on the Overview tab.

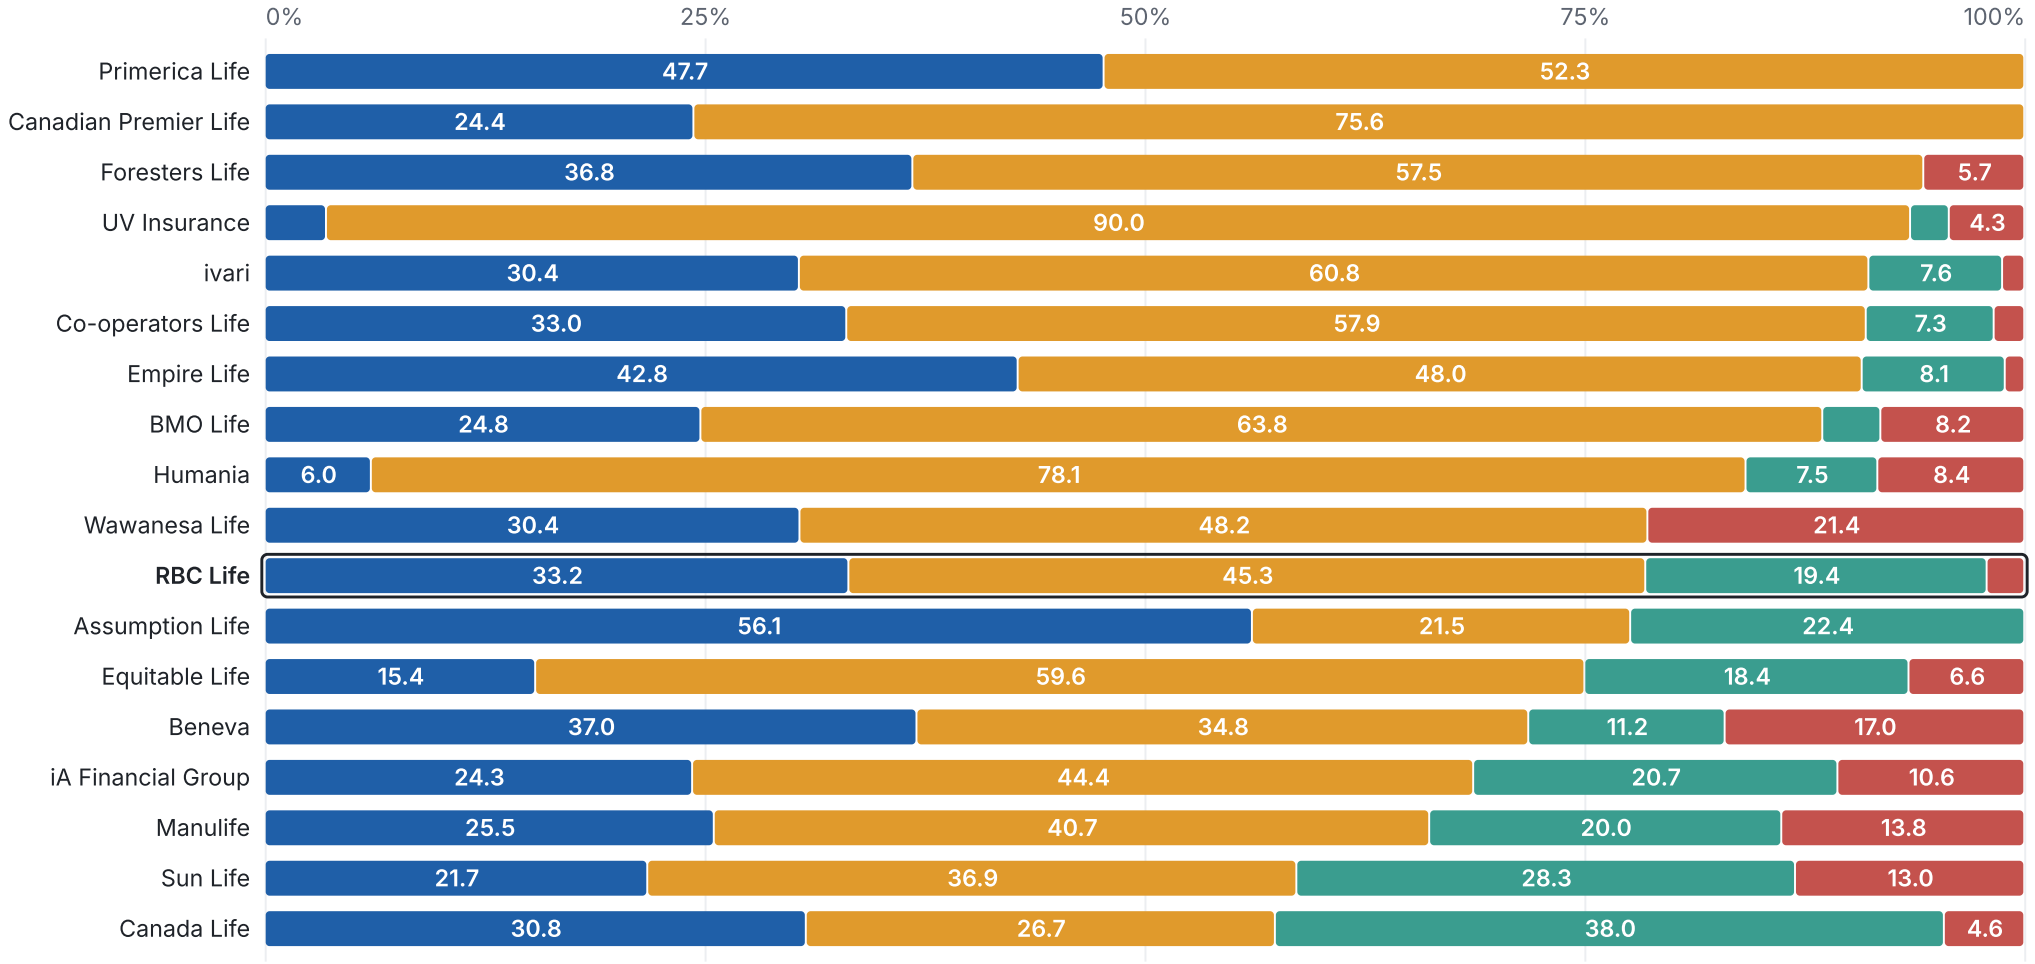

No figure: iA Financial Group, Beneva, UV Insurance, Assumption Life, Humania, Desjardins Insurance

Liquidity risk

Portfolio by liquidity tier

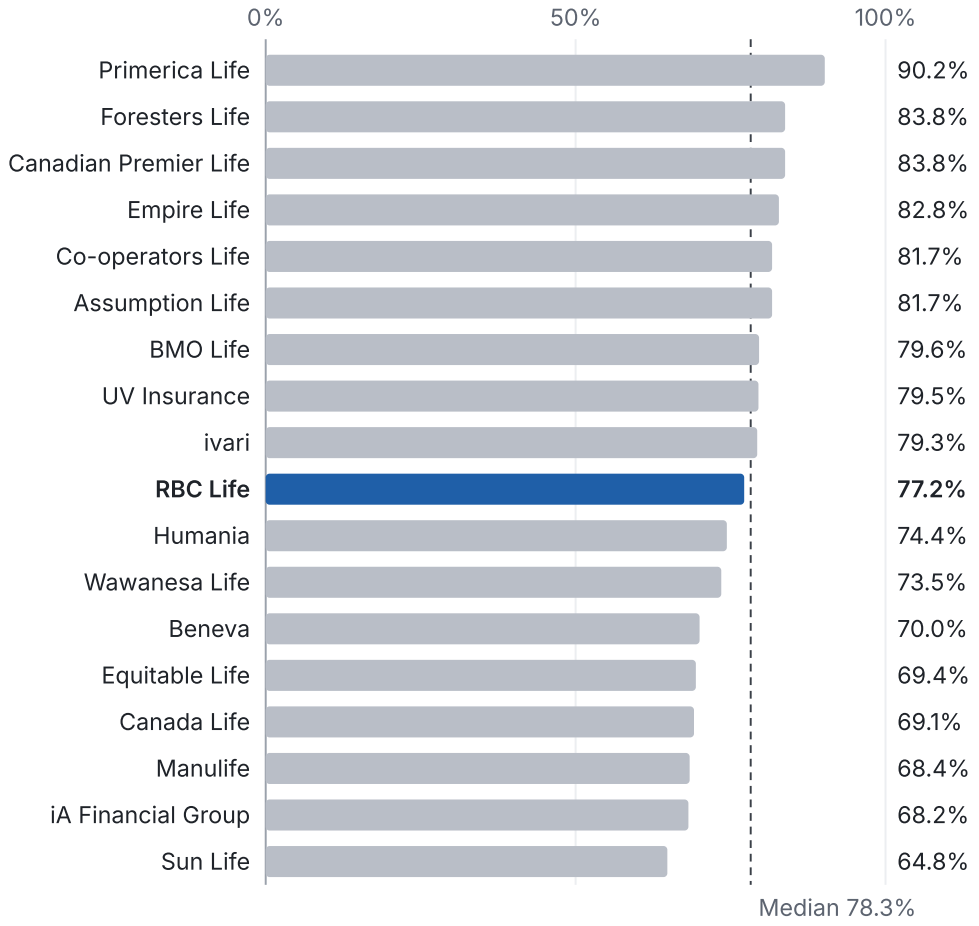

Cash and government bonds · Public bonds and shares · Mortgages and private loans · Real estate and private equity

Doff's time-bucket view of liquidity applied to the asset side: how much of each latest general-account portfolio could be sold or repo'd within days, within weeks, or only over months. Policy loans sit with private loans.

Liquidity-weighted assets

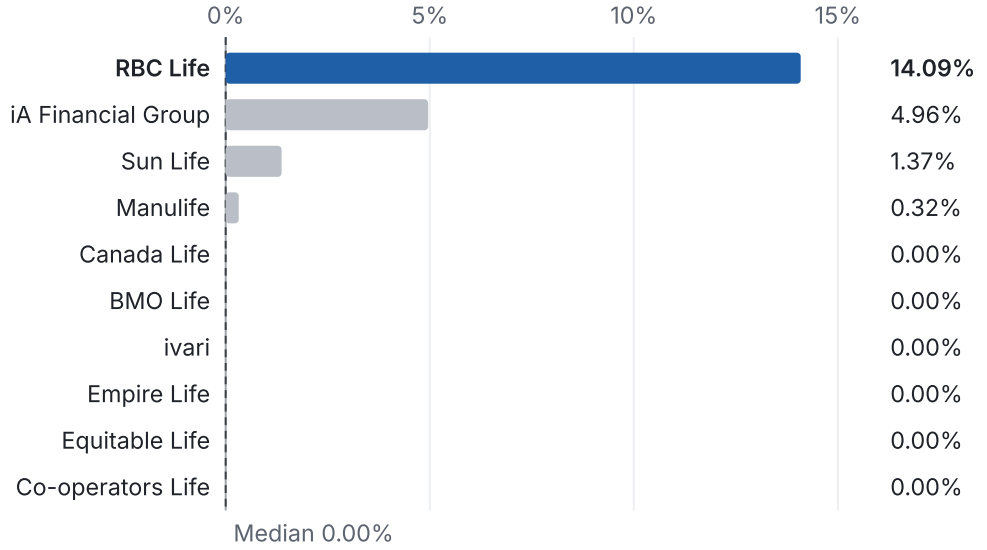

Doff's weighted liquidity ratio uses assets weighted by how readily they turn into cash. Weights here are illustrative: cash 100%, government bonds 95%, public corporate bonds 85%, ABS and listed shares 70%, mortgages and private liquid loans 50%, private placements and other private debt 40%, real estate and private equity 20%, policy loans 0%. Liability-side outflows are not public, so this is the numerator only, as a share of the portfolio.

No figure: Desjardins Insurance

Repo funding

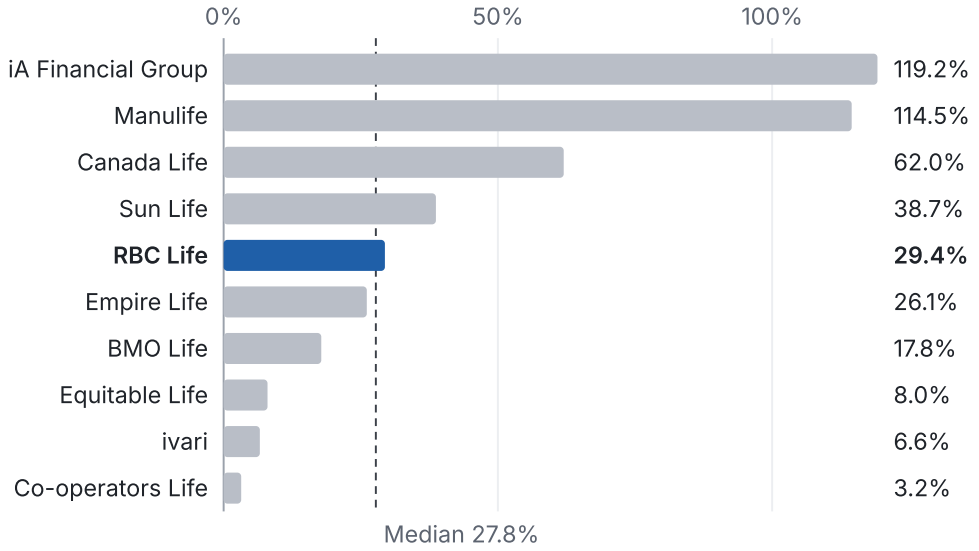

Securities sold under repurchase agreements as a share of the general-account portfolio, OSFI LF3 fiscal 2025 (iA and Manulife from their Q2 2026 notes). Repos raise contingent liquidity needs: collateral calls rise when rates move.

No figure: Beneva, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance

Derivative notionals

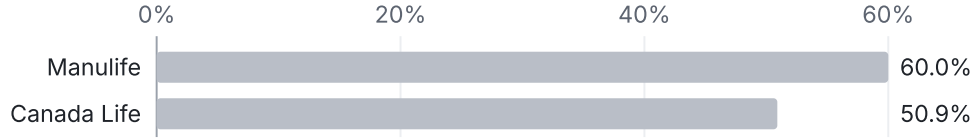

Gross notional of interest rate, currency, equity and credit derivatives as a share of the portfolio, OSFI LF3 fiscal 2025 (iA from its Q2 2026 notes). A rough gauge of margin and collateral calls under stress.

No figure: Beneva, UV Insurance, Wawanesa Life, Assumption Life, Foresters Life, Canadian Premier Life, Primerica Life, Humania, Desjardins Insurance

Published liquid-asset measures

Only two peers publish a liquid-asset total. Manulife counts cash plus investment-grade government, corporate and securitized bonds and public equities; Great-West Lifeco counts net liquid assets after removing pledged and non-liquid holdings. Both are shown against invested assets. Sun Life and iA describe liquidity stress tests without publishing the ratios.

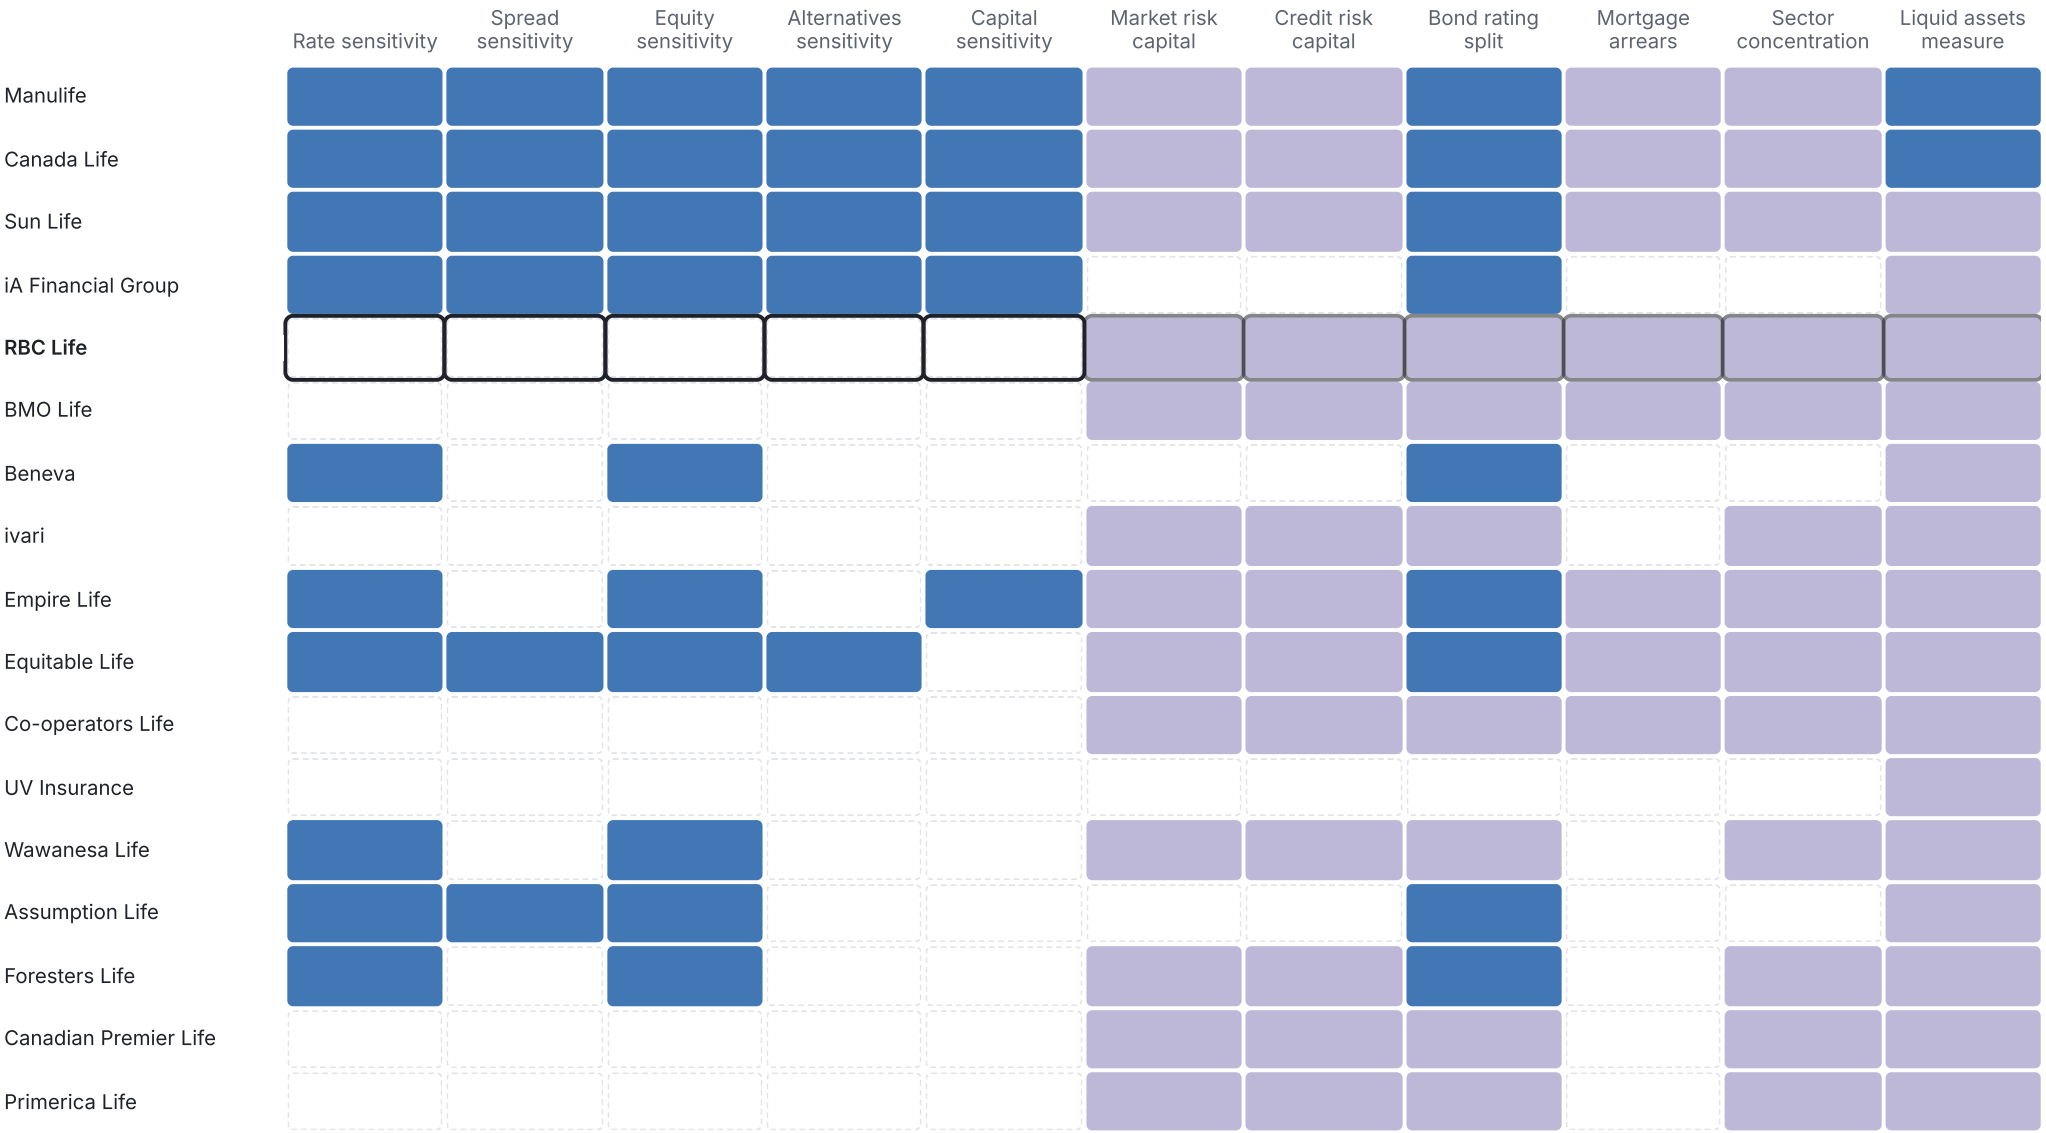

Disclosure map

What each peer publishes

Disclosed by the insurer · Available from regulatory data only · Not available

The large listed groups disclose a full set of market sensitivities and rating tables; most smaller peers publish only partial notes; RBC Life, BMO Life, ivari, Co-operators Life, Canadian Premier and Primerica publish no investment risk metrics of their own, so OSFI returns are the only view. Canada Protection Plan reports inside Foresters. Desjardins, Humania and UV publish little at the life-company level.

How the metrics map to the framework

- **Market risk.** Doff measures market risk as the change in the market-value balance sheet under shocks to rates, spreads, equity and real estate. The disclosed IFRS 17 sensitivities are that measure for earnings and the capital ratio; LICAT market risk capital is the regulator's standard version of the same shocks.
- **Credit risk.** Doff builds credit risk from ratings (probability of default), loss given default and concentration. Here: rating mix, below-investment-grade share, private credit and mortgage share (higher loss given default uncertainty), LICAT credit risk capital, credit loss allowances, problem mortgages and sector concentration.
- **Liquidity risk.** Doff's liquidity ratio is liquid assets over liquid liabilities by time bucket. Insurers do not publish the liability side, so the dashboard shows the asset side: liquidity tiers, a liquidity-weighted asset share, repo funding and derivative notionals that drive collateral calls.
- **Scope.** OSFI figures are for the regulated legal entity (Canada Life Assurance, Manufacturers Life, Sun Life Assurance of Canada), while their disclosed sensitivities are group-wide. LICAT credit and market capital cover non-participating products only.
