Canadian life & health insurers: peer investment landscape

RBC Life against 19 peers: IFRS 17 discount curves, general-account portfolio composition and investment risk (market, credit and liquidity).

RBC Life LICAT ratio	Liability on its discount curve vs peer median	Private credit, % of general account	Repos, % of portfolio
132%	**-0.24%**	**19.4%**	**14.1%**
peer median 159%	C$-24MM per C$10Bn	peer median 7.4%	next peer iA Financial 5.0%

Data as at year end 2025 and the latest 2026 filings (OSFI, AMF and annual reports). Prepared 28 October 2026 with the financial-analysis plugin's competitive-analysis framework. ▸ **RBC Life** is coloured, outlined and bold in every chart and table; peers are grey and the dashed line or tick is the peer median.

Source: the three analyses in abiddobani/InsuranceCompanies (analysis/discount_curves, analysis/portfolio_composition, analysis/investment_risk), re-run 28 Oct 2026.

RBC Life runs a high-quality but thinly capitalised book, with two concentrations peers do not have

Scale and capital.

132%

LICAT ratio, third-lowest of 17

RBC Life is the 5th largest general account (C$25.7Bn of 18) but its 132% LICAT ratio is the third-lowest of 17, 27 points under the 159% median.

Discount curve.

-0.24%

liability vs peer median curve

Its IFRS 17 curve values liabilities 0.24% below the peer median (C$24MM per C$10Bn), inside a C$876MM range from iA (most generous) to Primerica (most conservative).

Portfolio mix.

64%

of the general account in public bonds

Public bonds dominate (64%), private credit is 19.4% (4th highest of 18) and alternatives are small (2.1%).

Concentrations.

37.6%

of corporate bonds coded Energy

37.6% of corporate bonds are coded Energy (median 10.7%) and repos fund 14.1% of the portfolio, about 3x the next peer.

Par and disclosure.

177 bp

par curve below its dividend scale rate

RBC's filed par curve sits 177 bp under its dividend scale rate, the widest gap; it publishes no market sensitivities, while disclosing peers lose C$16–336MM on a C$25Bn book in moderate shocks.

Source: slides 3 to 20. Peer medians are taken across every insurer with the metric; scale is C$ general-account invested assets at each insurer's latest filing.

Twenty insurers in five strategic groups; RBC Life competes with BMO Life as the bank-owned pair

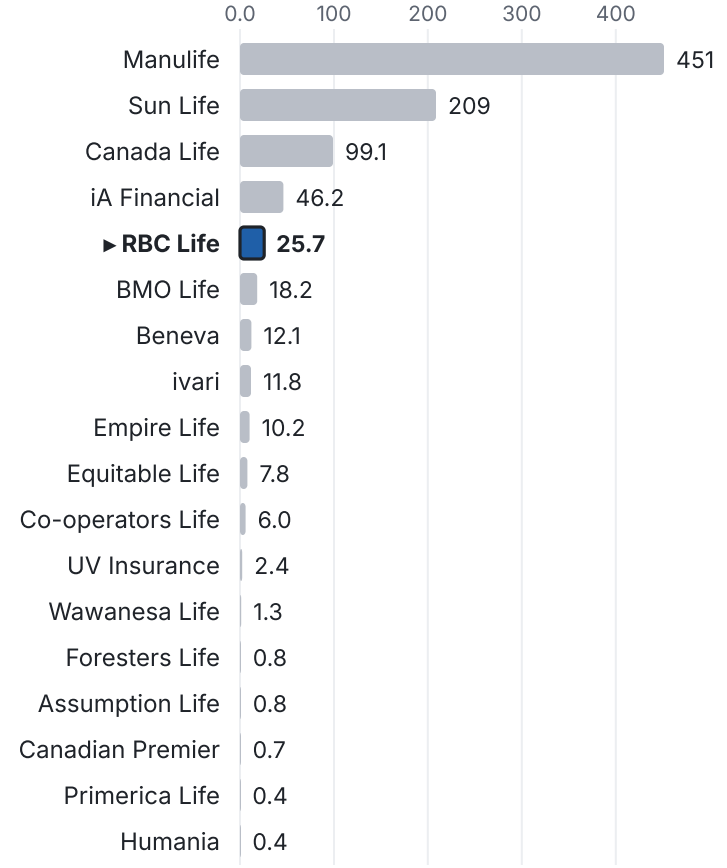

Peer set by ownership and regulator

General-account size at each insurer's latest filing. Canada Protection Plan reports inside Foresters Life; Desjardins' life portfolio is not published apart from Desjardins Group (n/d).

Group	Ownership / regulator	Insurers (general account, C$Bn)
Big three groups	Listed, global, OSFI	Manulife 451.3 · Sun Life 208.6 · Canada Life 99.1
Quebec and mutual leaders	AMF; iA listed, Desjardins and Beneva cooperative / mutual	iA Financial 46.2 · Desjardins n/d · Beneva 12.1
Bank-owned	**OSFI, October fiscal year**	**▸ RBC Life 25.7 · BMO Life 18.2**
Mid-size	OSFI; stock, mutual and Sagicor-owned	ivari 11.8 · Empire Life 10.2 · Equitable Life 7.8 · Co-operators Life 6.0 · Wawanesa Life 1.3
Niche and small	OSFI, AMF, FCNB; fraternal, mutual, distribution-led	Foresters Life 0.8 · Canadian Premier 0.7 · Primerica Life 0.4 · Assumption Life 0.8 · UV Insurance 2.4 · Humania 0.4

General account, C$Bn

Latest filing; Desjardins not published.

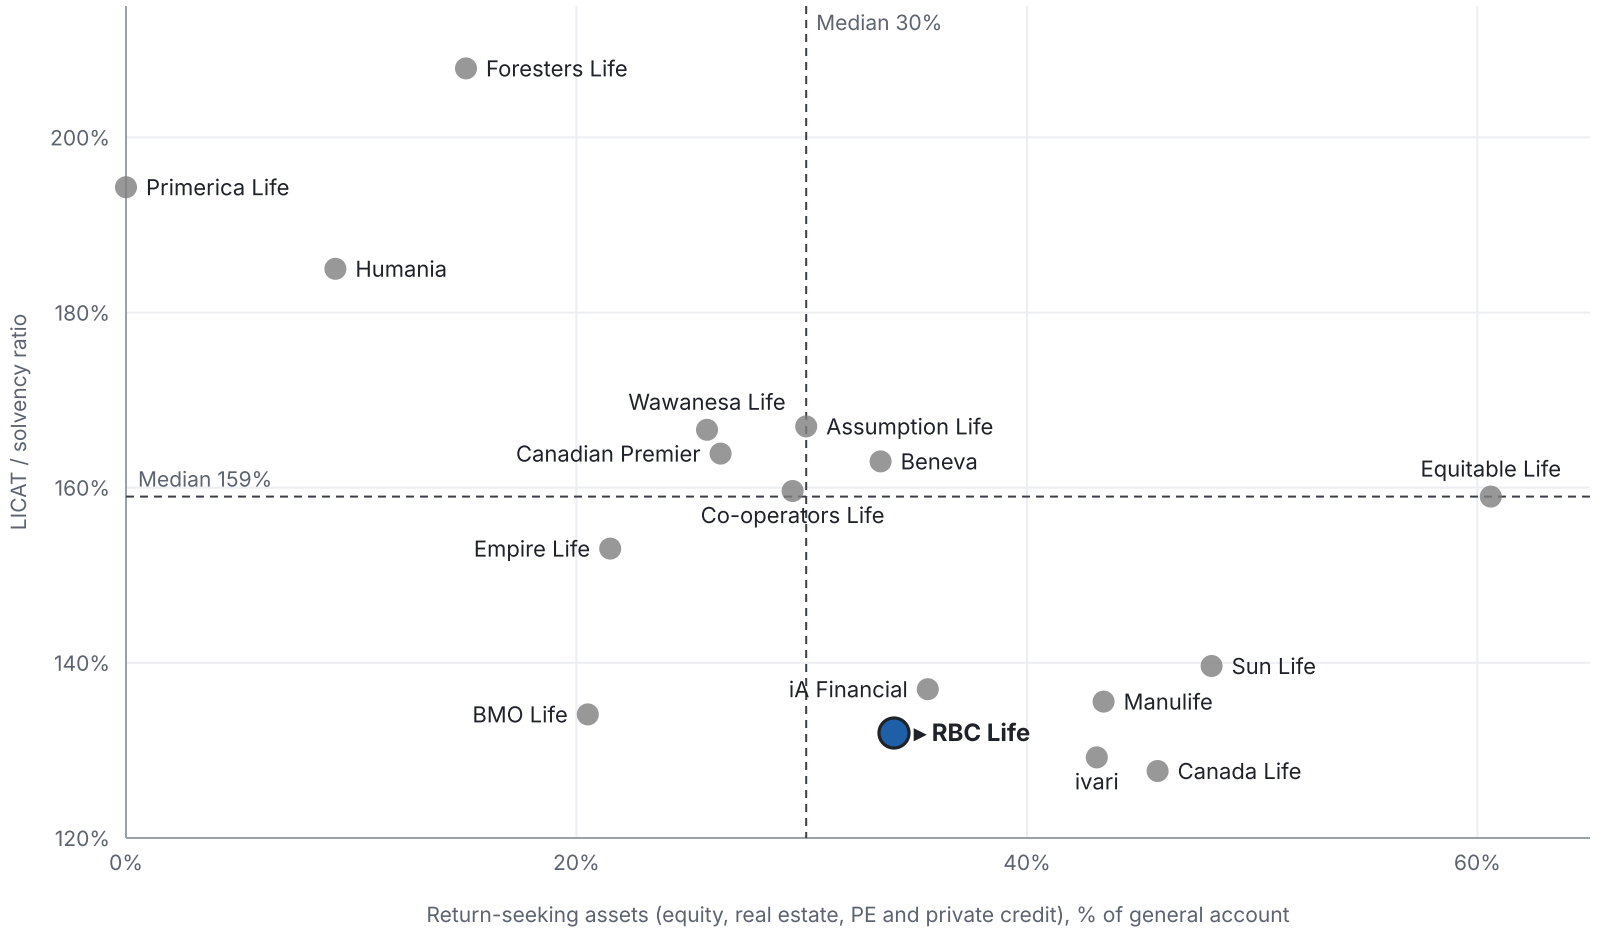

Source: OSFI, AMF and FCNB registers; general-account size from the portfolio composition analysis (mid-2026 for OSFI filers and listed groups, December 2025 for annual reporters).

Positioning: RBC Life takes median-level investment risk on a below-median capital buffer

Risk appetite against capital strength

Each dot is one insurer at its latest capital ratio and general-account mix. Dashed lines are the peer medians.

Reading the map. The medians are 30% return-seeking assets and a 159% capital ratio.

RBC Life sits at 34% return-seeking assets and a 132% ratio, in the lower-right quadrant with the big three and ivari: a similar risk appetite on a thinner buffer.

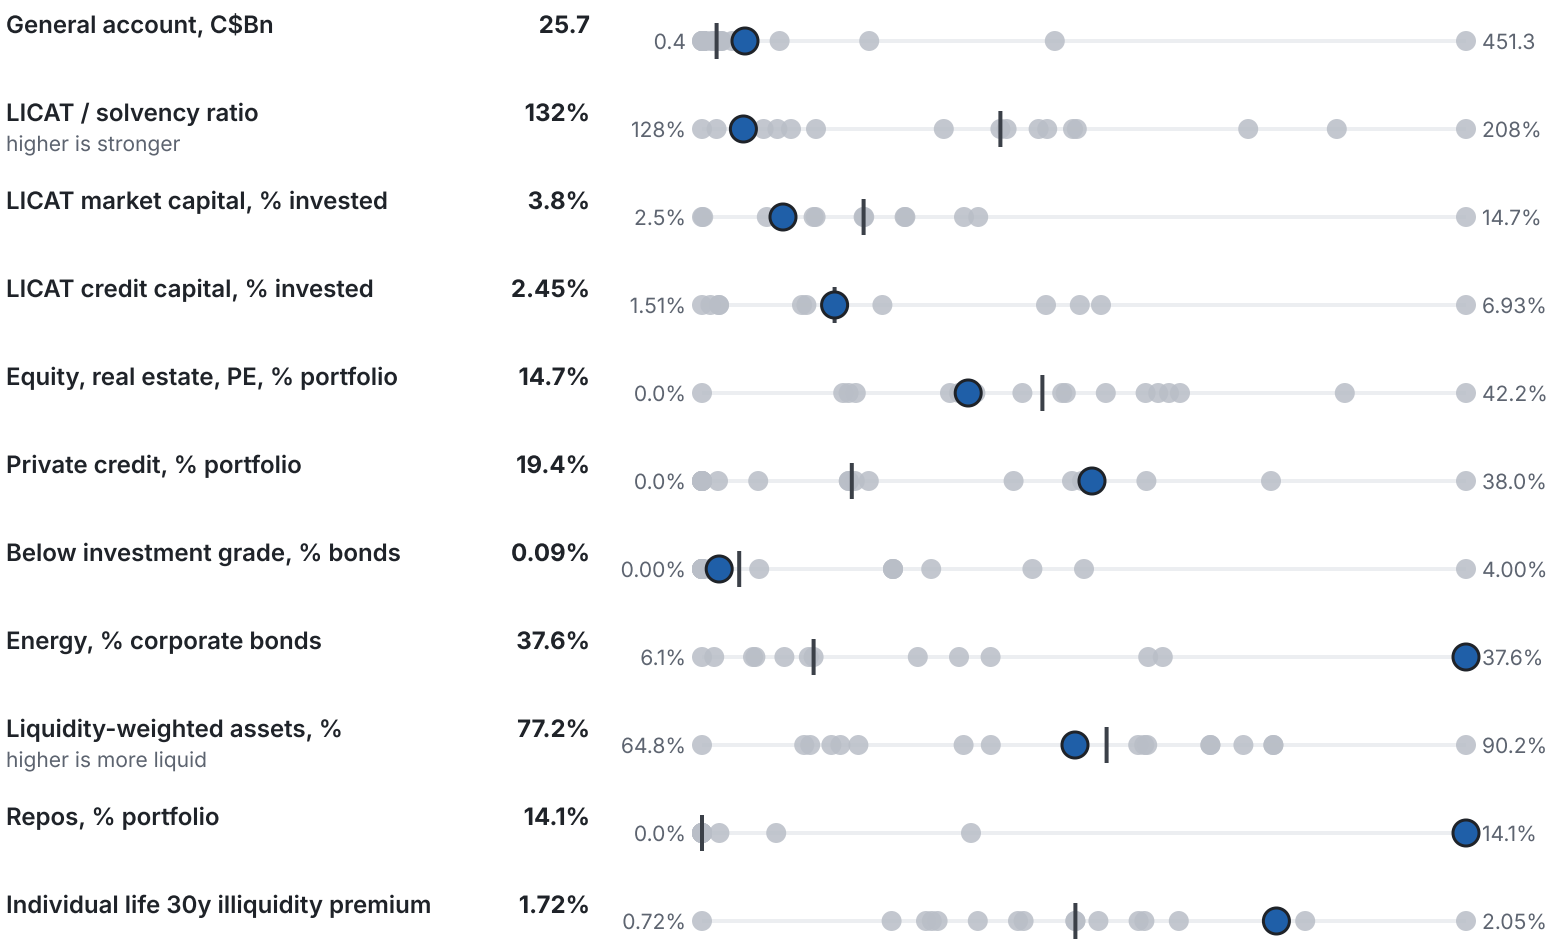

Equitable Life takes the most risk (equities 36% of its book) but holds a 159% ratio; Foresters and Primerica hold the most capital on the least risk.

Source: LICAT total ratio from OSFI LCQ FY2025 Q4 (CARLI / solvency ratio for iA, Beneva, Assumption, Humania); asset mix from the portfolio composition analysis. UV Insurance and Desjardins publish no ratio.

RBC Life profile: fifth-largest book, investment-grade bonds, the thinnest disclosure in the peer set

Where RBC Life sits on each metric

Each row is one metric on its own scale, from the lowest peer to the highest. Grey dots are the other peers, the tick is the peer median and the coloured dot is RBC Life.

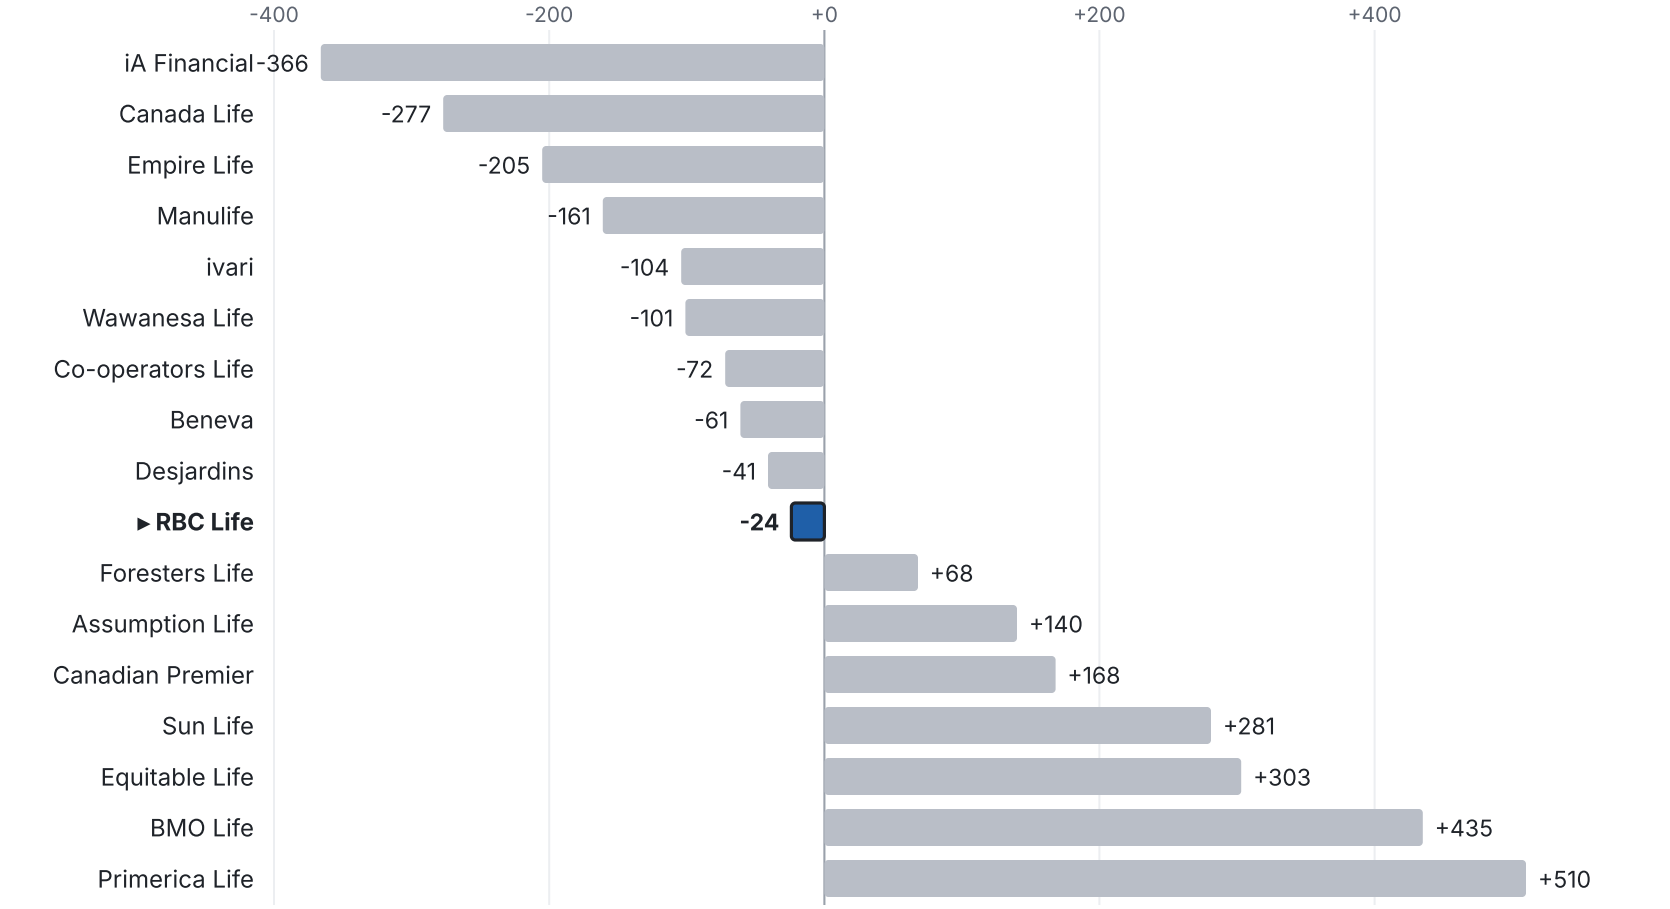

Category	Assessment
Business	Royal Bank of Canada's life insurer: individual life, living benefits, group and individual annuities.
Strengths	99.9% investment-grade bonds; 31.6% government bonds; near-zero credit losses (ECL 0.7 bp of invested assets).
Weaknesses	LICAT 132% vs 159% median; 37.6% Energy coding; repos 14.1% of portfolio; no sensitivities published.
Posture	Long-duration public bonds plus private placements (11.7%); little real estate or PE; derivative and repo overlay for ALM.

Source: OSFI LCQ, LF2, LF3 for RBC Life Insurance Company (legal entity, fiscal year to 31 Oct 2025; portfolio at 31 Jul 2026); peers as on later slides. Metrics RBC Life does not publish are marked.

Discount curves: RBC Life is at the peer median; iA to Primerica spans C$876MM of liability per C$10Bn

Liability on each insurer's curve against the peer median curve, C$MM per C$10Bn

Negative = higher discount rates and a smaller liability (more generous); positive = more conservative. Stylised liability: payments falling 4% a year for 80 years.

RBC Life: -24 (-0.24%). Its forward-shaped curve runs above the median at 20 to 30 years (30y premium 1.72%) and below it at 10 and 70+ years, which nets out.

Manulife carries the highest 30y premium (2.05%) but the lowest ultimate risk-free rate (3.40%).

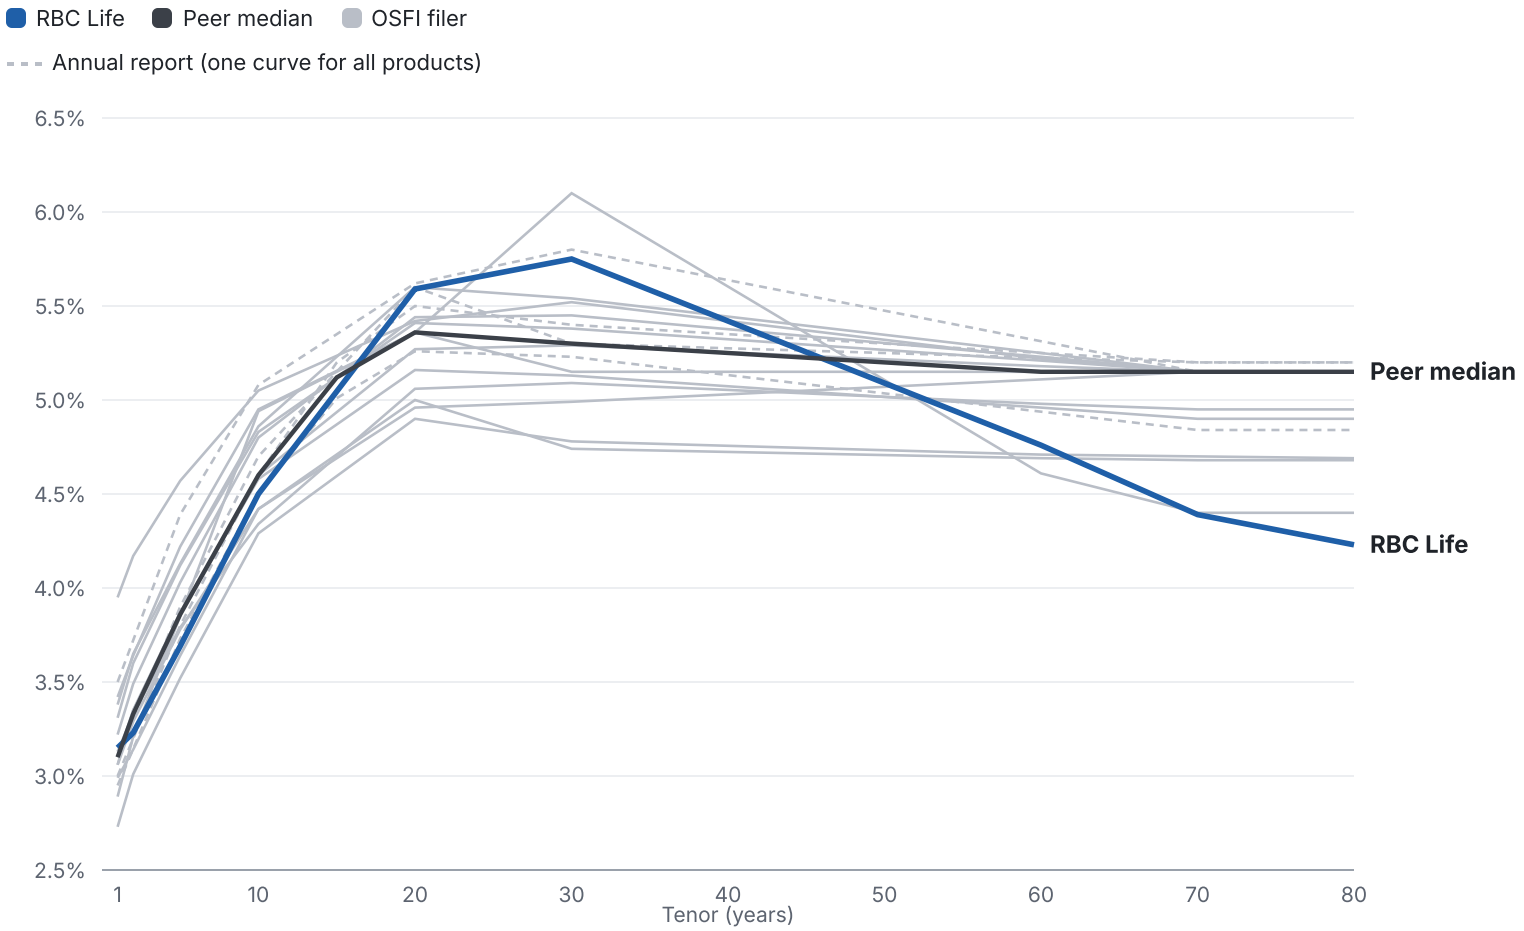

Primerica, BMO Life, Equitable and Sun Life discount most conservatively, each more than C$280MM per C$10Bn above the median.

Source: OSFI LF2 pages P35035 to P35065 (most illiquid curve, individual non-par), Q4 2025; iA, Desjardins, Beneva and Assumption Life 2025 annual reports. Analysis: analysis/discount_curves.

RBC Life's curve runs above the peer median at 20 to 30 years and below it at the long end

Individual life discount curves, year end 2025, spot rates

Most illiquid curve for non-participating individual insurance. RBC Life files rates with the shape of one-year forwards; they are compounded to spot (an interpretation, not stated by OSFI).

30-year rate and premium by product

Product	RBC rate	Median	RBC prem.	Median
Individual life	5.75%	5.30%	1.72%	1.37%
Individual annuity	5.75%	5.30%	1.72%	1.37%
Group annuity	5.75%	5.30%	1.72%	1.28%

RBC files one curve for all its non-par lines, so its 30y rate (5.75%) and premium (1.72%) exceed the median for every product.

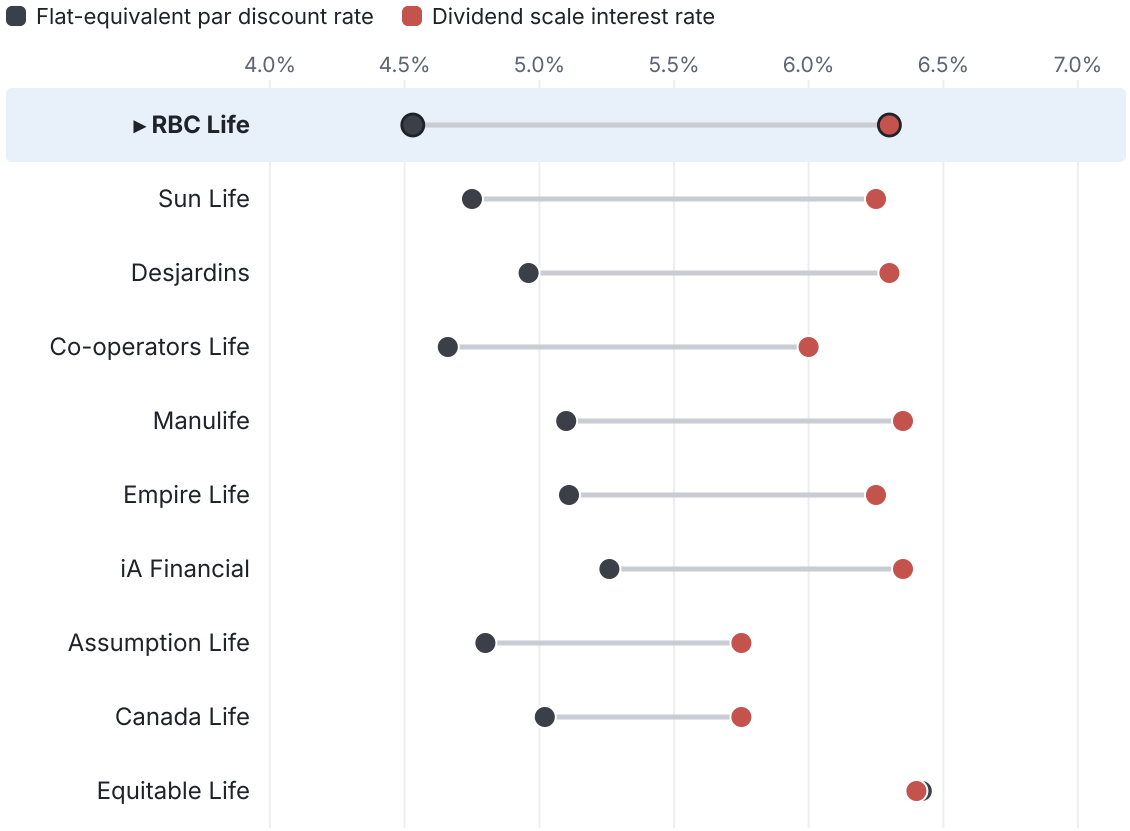

At 80 years RBC's spot rate is 4.23% against a 5.15% median; its filed ultimate forward rate is 4.10%.

Source: OSFI LF2 by line of business, Q4 2025 (fiscal Q4 2025 for RBC Life and BMO Life); annual reports for iA, Desjardins, Beneva and Assumption Life. Premiums for insurers without their own risk-free curve are measured over the median OSFI risk-free curve.

Par: dividend scale rates run 73 to 177 bp above filed par curves; RBC Life's 177 bp gap is the widest

Filed par discount rate (flat-equivalent) against the 2025 dividend scale interest rate

The flat-equivalent rate is the single rate giving the stylised liability the same value as the filed par curve. Ordered by the gap.

Insurer	Flat-equiv.	DSIR	Gap, bp	Par account C$MM
▸ RBC Life	**4.53%**	**6.30%**	**+177**	**51**
Sun Life	4.75%	6.25%	+150	24,200
Desjardins	4.96%	6.30%	+134	n/d
Co-operators Life	4.66%	6.00%	+134	2,936
Manulife	5.10%	6.35%	+125	15,980
Empire Life	5.11%	6.25%	+114	1,320
iA Financial	5.26%	6.35%	+109	69
Assumption Life	4.80%	5.75%	+95	n/d
Canada Life	5.02%	5.75%	+73	62,770
Equitable Life	6.42%	6.40%	-2	3,320

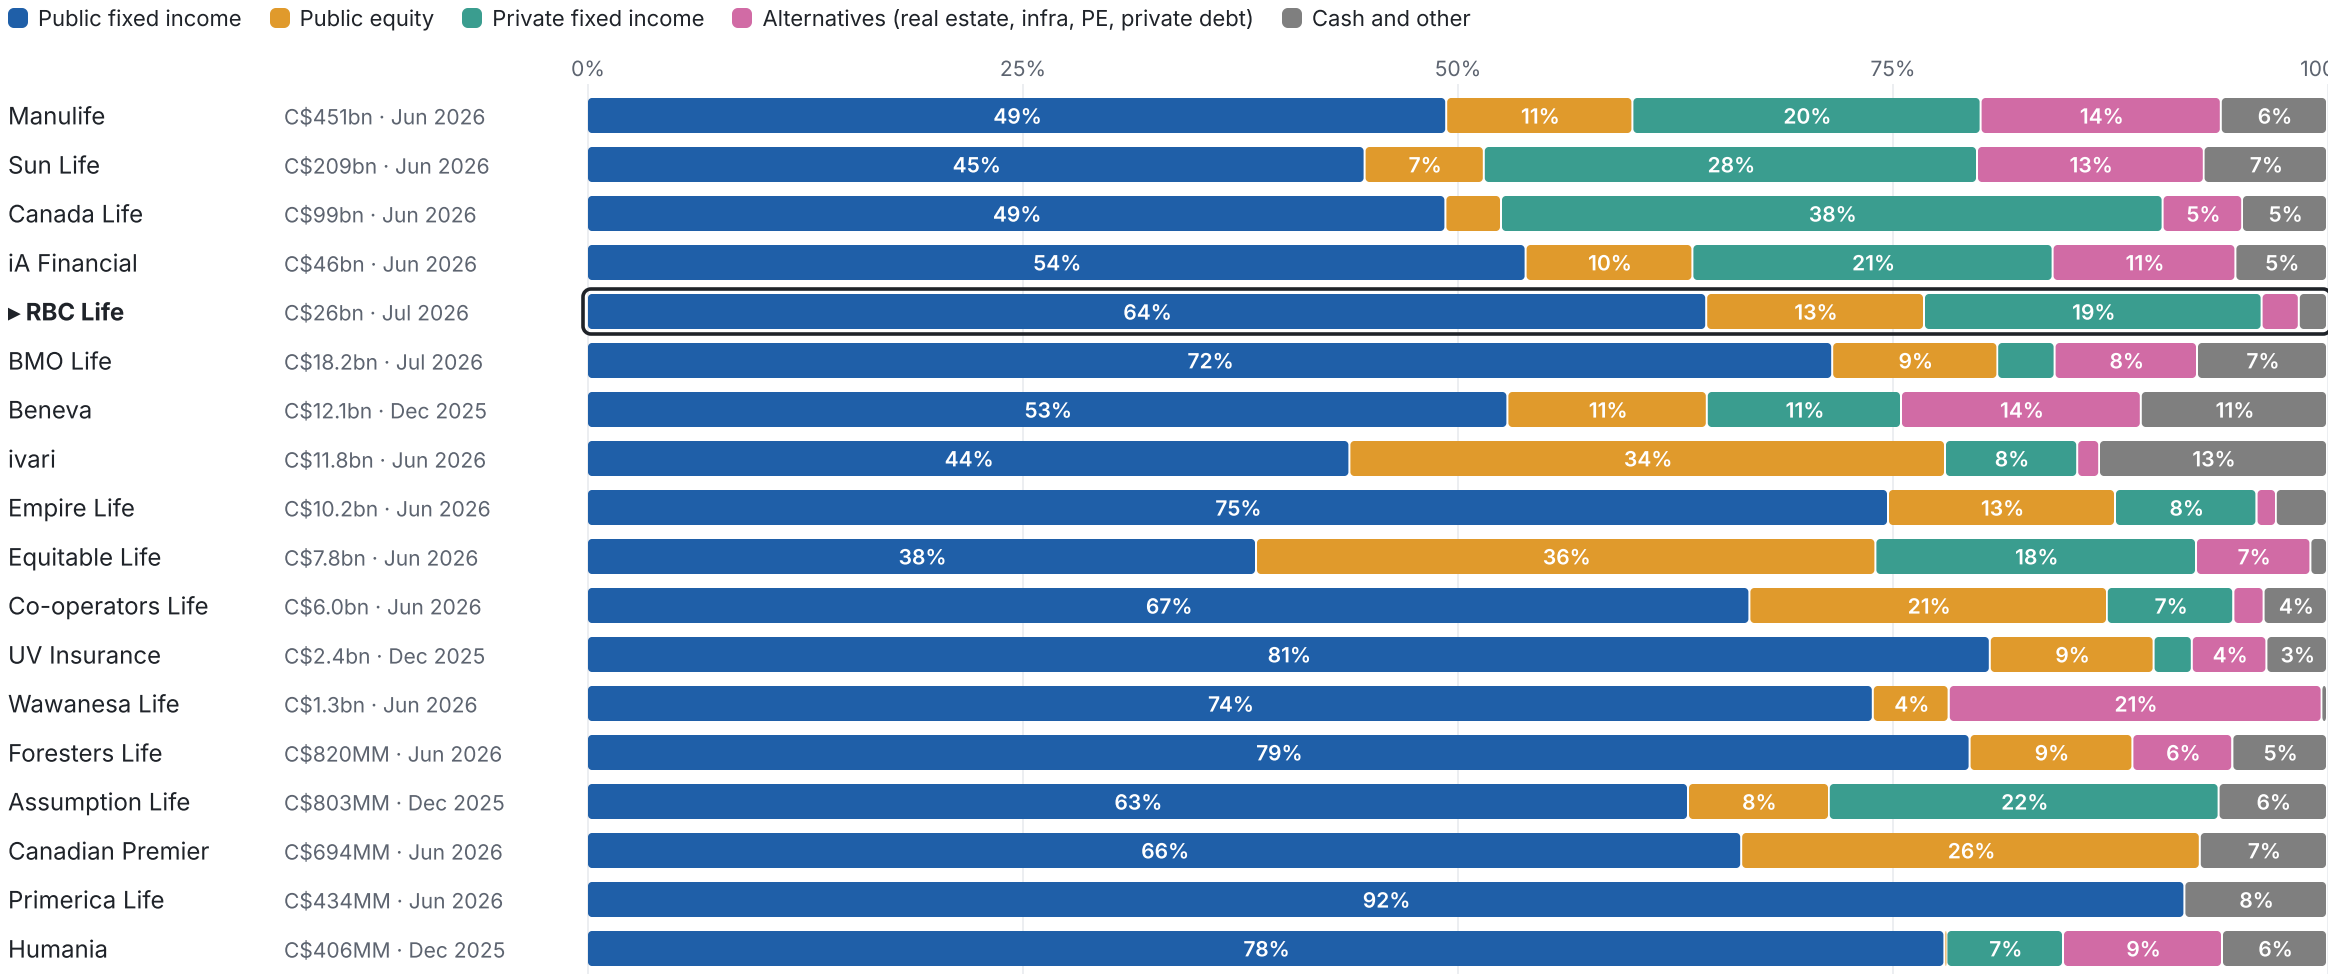

Equitable Life discounts par at its dividend scale rate (gap −2 bp). RBC's par account is small (C$51MM), so its gap matters more for disclosure than for its balance sheet. ivari, Wawanesa Life and Beneva publish no dividend scale rate.

Source: OSFI LF2 par curves, Q4 2025; annual-report curves for iA, Desjardins and Assumption Life; dividend scale interest rates 2025 from PolicyAdvisor's table, RBC Life and Equitable Life confirmed on their own sites; par account sizes from PolicyAdvisor 2026 and Co-operators' par report.

Portfolio: RBC Life is 64% public bonds with few alternatives; the big three and Equitable lean on private assets

Portfolio mix, % of general account

Largest portfolio first. General account only; segregated funds, asset-manager AUM, pass-through funds backing universal life, bank-funded loans and own-use property are excluded. Segments under about 5% are unlabelled; the next slide gives the sub-class detail.

Source: OSFI LF2 P21012 / LF1 (OSFI filers, mid-2026); Q2 2026 supplements for Manulife, Sun Life, Great-West Lifeco and iA; 2025 annual reports for Beneva, UV, Humania and Assumption Life. Desjardins' life portfolio is not published. Analysis: analysis/portfolio_composition.

RBC Life overweights government bonds and public equity, and holds the least cash of the larger peers

Sub-class detail, % of general account (darker = larger share)

Nine largest peers with a sub-class split, RBC Life first. Median across all 18 charted insurers. Private placements are mapped to illiquid term loans; OSFI filers' ABS sit inside corporate bonds.

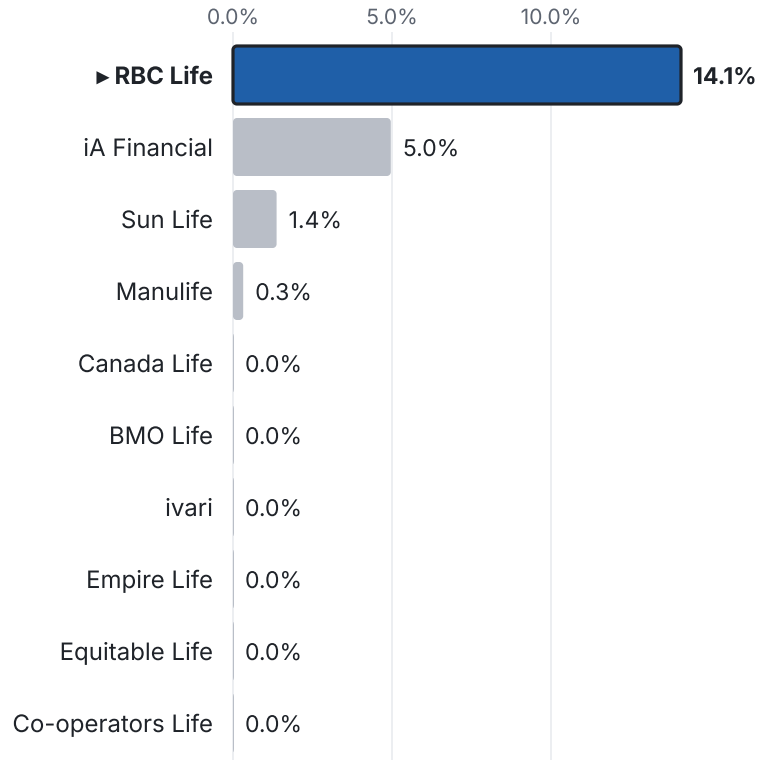

% of general account	▸ RBC Life	BMO Life	Canada Life	iA Financial	Empire Life	Sun Life	Manulife	Equitable Life	ivari	Median

Source: as previous slide. UV Insurance and Humania publish only summary statements and are not shown.

RBC Life funds 14.1% of its portfolio with repos, about 3x the next peer (iA Financial, 5.0%)

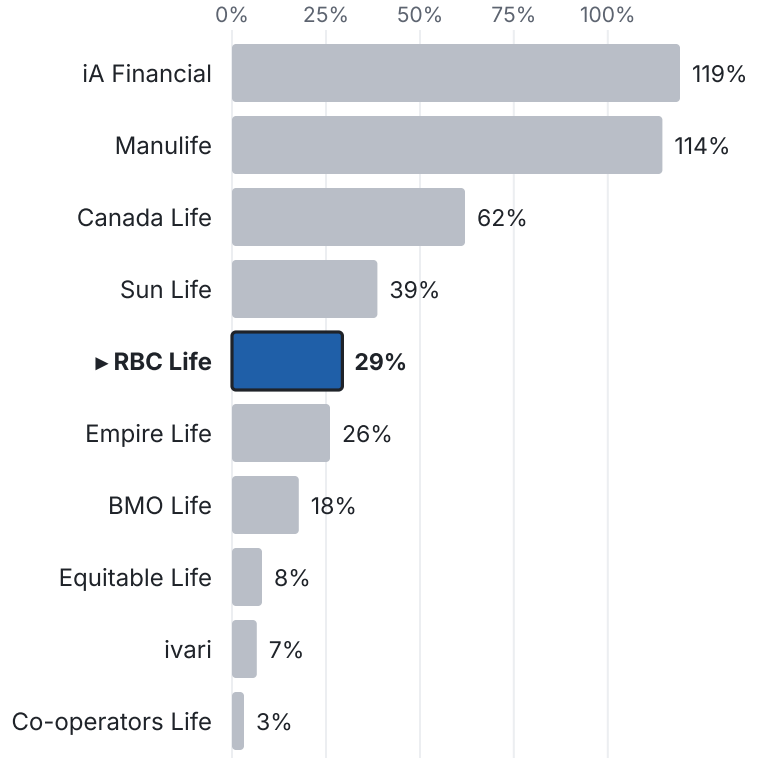

Repos, % of portfolio

Securities sold under repurchase agreements at fiscal year end 2025.

Derivative notional, % of portfolio

All derivative notionals (currency, equity, rates, credit) over the general account.

RBC Life, 31 Oct 2025 (C$MM)

Repos: 3,625 (14.1%)

FX derivatives: 3,813 (14.8%)

Equity derivatives: 179 (0.7%)

Rate derivatives, linear: 2,782 (10.8%)

Rate derivatives, non-linear: 786 (3.0%)

Repos add leverage and a collateral call in a rate spike. Only iA (5.0%), Sun Life (1.4%) and Manulife (0.3%) report any; the other OSFI filers report none.

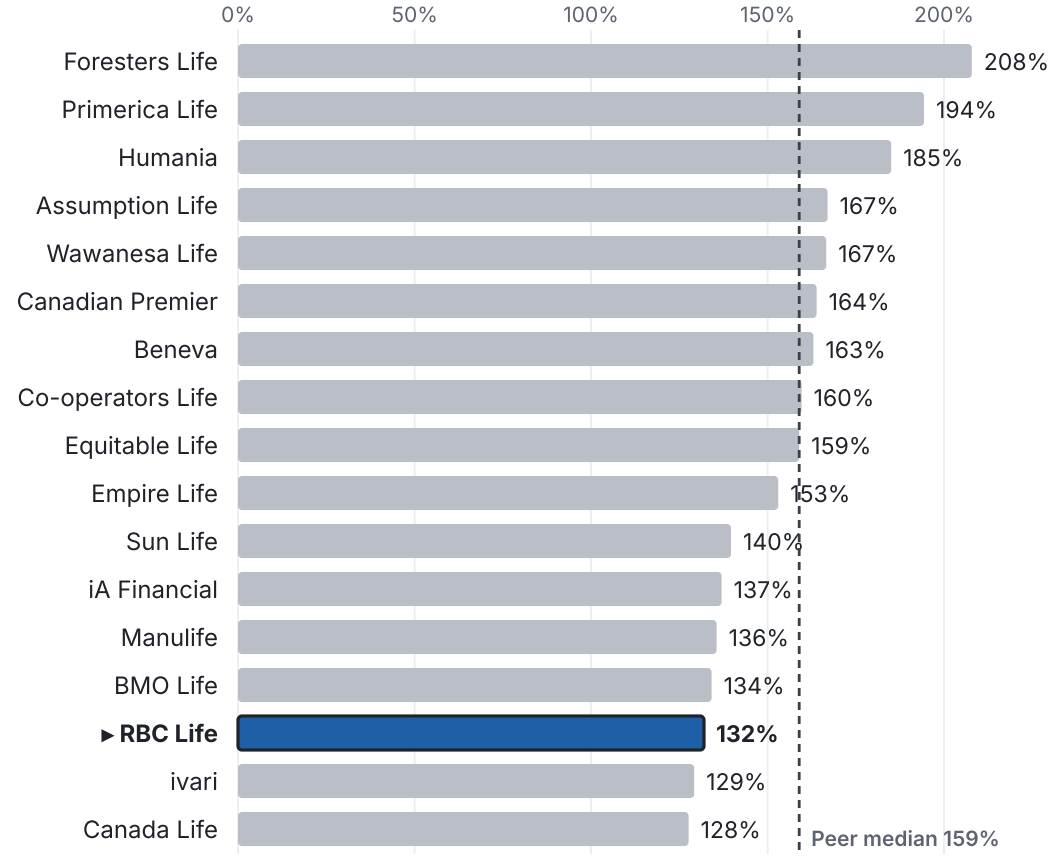

Securities lending and ISN are not disclosed by any peer.

Source: OSFI LF3 P21110 derivative notionals and P22030 row 280 repos, fiscal 2025 (legal entity); iA and Manulife financial statement notes. Annual-report insurers are not covered.

Capital: RBC Life's 132% LICAT ratio is the third-lowest of 17, 27 points below the 159% median

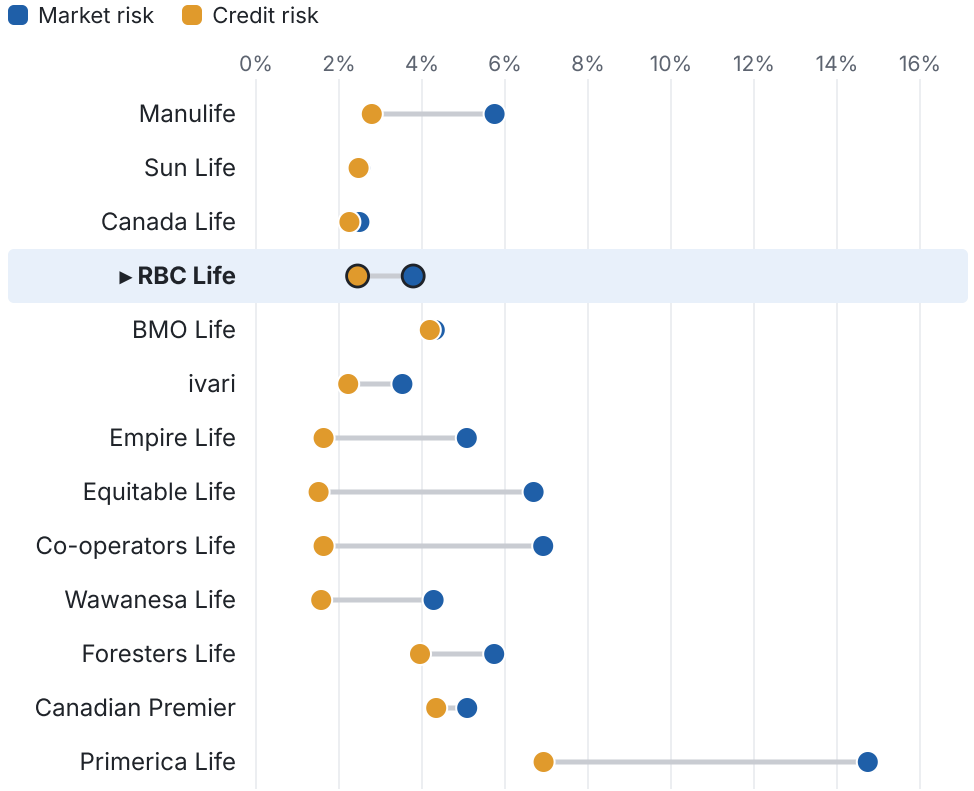

Total capital ratio, %

LICAT total ratio for OSFI filers; CARLI solvency ratio for iA, Beneva and Humania; Assumption Life's own solvency ratio.

LICAT risk capital, % of invested assets

Non-participating business only, legal entity, fiscal 2025 Q4. Largest book first.

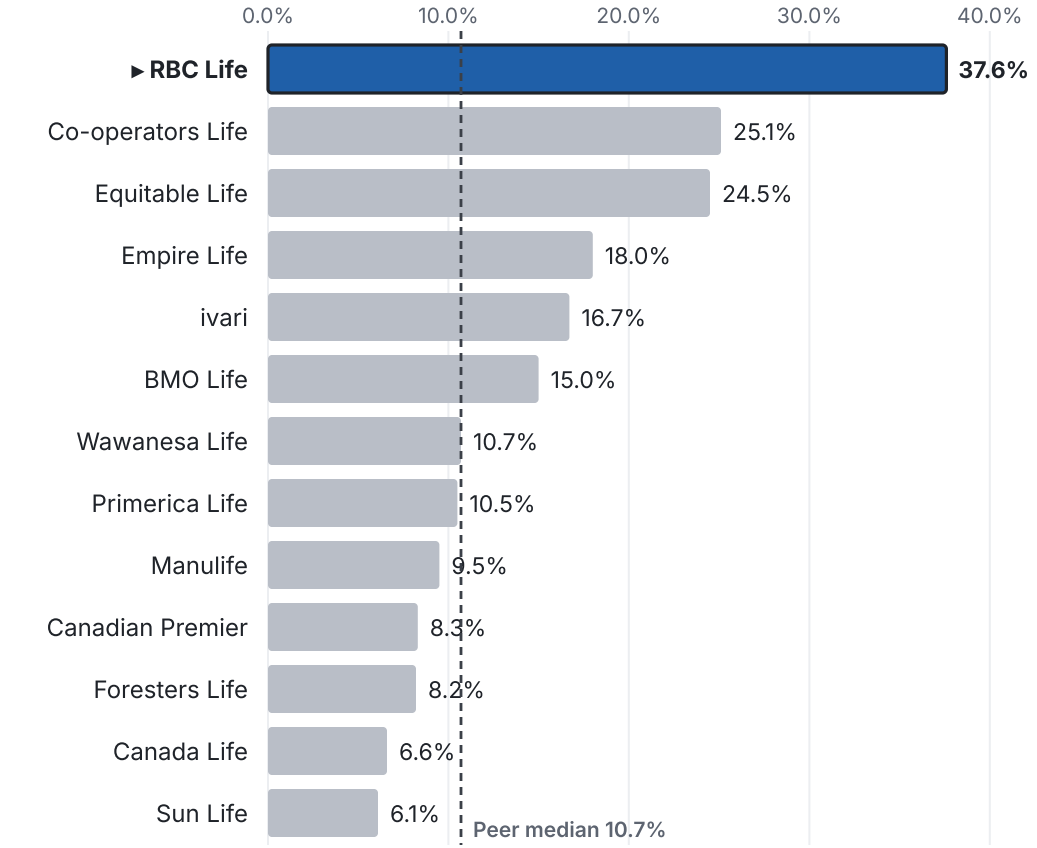

Source: OSFI LCQ (LICAT summary and components D3000010077 / D5000010057), FY2025 Q4 (RBC Life, BMO Life: Oct 2025); AMF and annual reports for iA, Beneva, Assumption and Humania. Analysis: analysis/investment_risk.

Credit: RBC Life's bonds are 99.9% investment grade, but 37.6% of its corporates are coded Energy, 3.5x the median

Energy issuers, % of corporate bonds

OSFI filers only (LF3 bonds by issuer sector). RBC Life files no Utilities line, so part of its Energy share may be sector coding.

Credit metrics, RBC Life against the peer median

Metric	RBC Life	Median
Below investment grade, % bonds	0.09	0.20
BBB, % bonds	n/d	23.9
Private credit, % portfolio	19.4	7.4
ECL allowance, bp of invested assets	0.7	0.0
Problem mortgages, % of mortgages	0.00	0.04
Largest sector, % corporate bonds	Energy 37.6	35.0
LICAT credit capital, % invested	2.45	2.45

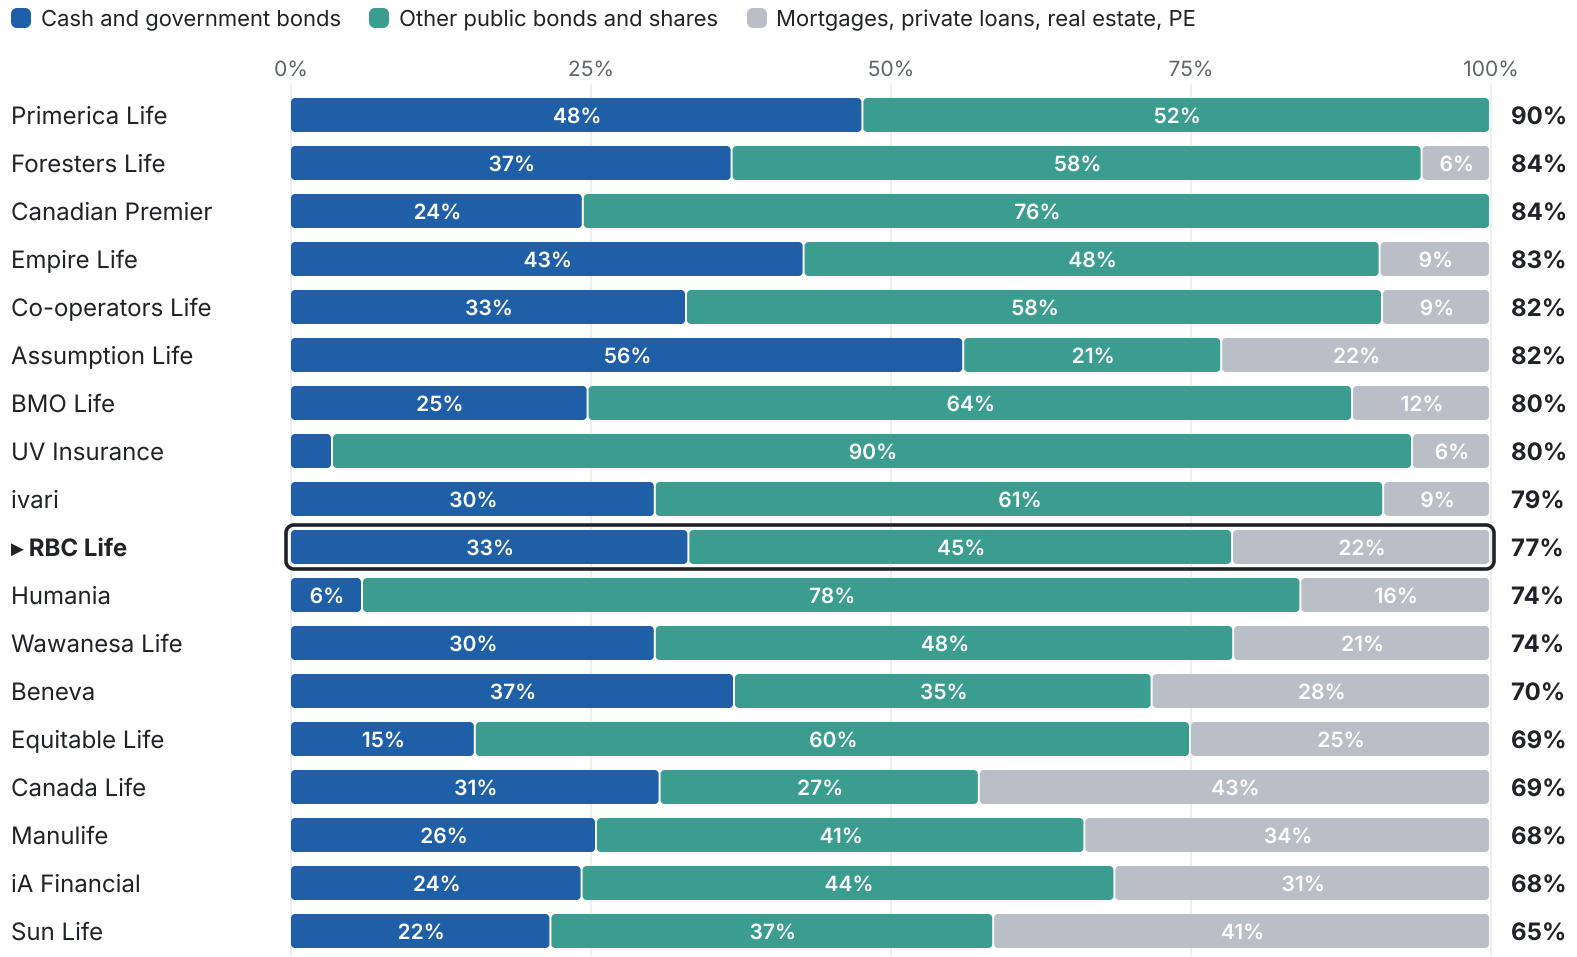

Manulife carries the most credit risk (4.0% below investment grade, 19 bp ECL); Sun Life the most problem mortgages (1.2%). RBC Life's private credit is almost all private placements and commercial mortgages.

Source: OSFI LF3 P21030 bonds by issuer sector and P21050 problem mortgages, LF2 P21020 expected credit losses (FY2025 Q4); rating splits from year-end 2025 annual reports (RBC Life publishes none).

Liquidity: RBC Life's liquidity-weighted assets (77%) sit at the median (78%); the big three run the least liquid books

Liquidity tiers, % of general account, with the liquidity-weighted ratio at right

Most liquid first by the weighted ratio. Weights after Doff's weighted liquidity ratio (illustrative): cash 100%, government bonds 95%, public corporates 85%, ABS and shares 70%, mortgages 50%, private debt 40%, real estate and PE 20%, policy loans 0%.

RBC Life vs median. Cash and government bonds (tier 1): 33.2% vs 30.4%. All public, liquid assets: 78.5% vs 81.4%.

The weighted ratio ignores funding: the 14.1% repo book draws on the same government bonds that make up RBC's liquid tier.

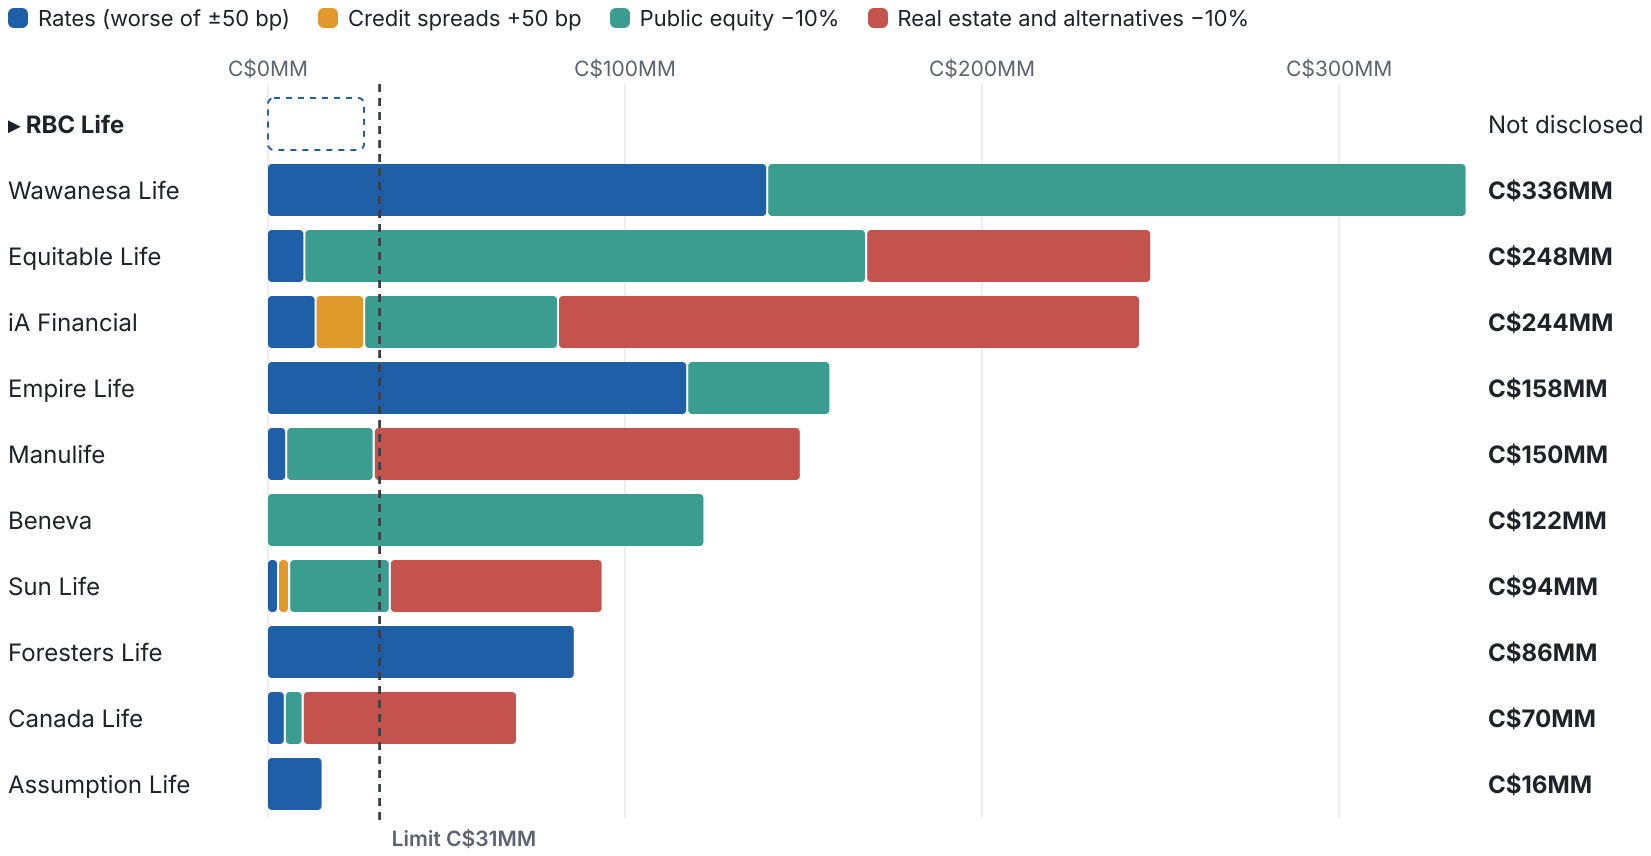

Only Manulife (60%) and Great-West Lifeco (51%) publish their own liquid-asset measure.

Source: latest general-account mix from the portfolio composition analysis; tier weights from R. Doff, Investment risks: market, credit and liquidity risk (Risk.net).

Market risk: moderate shocks cost disclosing peers C$16 to 336MM on a C$25Bn book; RBC Life publishes no sensitivities

Earnings at risk on a C$25Bn portfolio

Each peer's disclosed net income loss under each shock, divided by its invested assets and multiplied by C$25Bn, then added up. Undiversified: shocks are applied one at a time and a gain counts as zero. Fewer than four parts means the factor is not disclosed.

Peer median C$136MM. Equity and alternatives drive the large groups; rates drive Wawanesa, Empire and Foresters.

The dashed line is a C$35MM earnings limit on C$28Bn, pro-rated to C$31MM on C$25Bn. Only Assumption Life's disclosed shocks fit inside it.

After tax where disclosed; Empire and Wawanesa report profit or loss without saying, Foresters' figures are pre-tax and derived from its notes.

RBC Life, BMO Life, ivari, Co-operators Life, Canadian Premier and Primerica publish no sensitivities.

Source: year-end 2025 MD&A and financial statement sensitivity notes, scaled to C$25Bn of invested assets; ±100 bp and −15% shocks scaled linearly. Detail: analysis/investment_risk/disclosed_sensitivities.csv.

Scorecard (1/2): among the ten largest books, only Canada Life and ivari hold less capital than RBC Life

Peer scorecard, largest general account first

●●● = top third of peers on that metric by value, ●○○ = bottom third; a rating is a position, not a judgement. Curve vs median: liability on own curve against the peer median (negative = more generous). EaR: undiversified earnings at risk on C$25Bn (slide 15). – = not available.

Consolidation is reshaping the tail of the peer set; bank-owned insurers are pruning non-core blocks

Transactions among the peer set

Deal multiples are not disclosed for any of these transactions (n/d).

Acquirer	Target	Date	Deal value	Multiple	Rationale
UV Insurance	~200k BMO Life policies (incl. ~15k par)	Jun 2025	~C$50MM premiums	n/d	Assumption reinsurance; doubled UV's members, assets +35%
Sagicor Financial	ivari (from Wilton Re)	Oct 2023	C$375MM	n/d	Canadian platform for a TSX-listed Caribbean group
SSQ + La Capitale	Merger, now Beneva	Jan 2020	n/a (mutual)	n/a	Scale: Canada's largest mutual insurer
Great-West Life	London Life, Canada Life amalgamated	Jan 2020	n/a (internal)	n/a	One Canada Life brand and balance sheet
Foresters Financial	Canada Protection Plan	2017	n/d	n/d	No-medical / simplified issue distribution

For RBC Life. BMO's 2025 sale shows a bank-owned insurer exiting a closed block, a route to release capital if the 132% LICAT ratio becomes binding.

UV Insurance's assets grew 35% on the block; its general account is now C$2.4Bn, larger than Wawanesa Life's.

Sagicor's purchase of ivari added a Canadian book that now runs the highest public-equity share in the peer set (34%).

Source: Insurance Portal (9 Jun 2025); Sagicor press release (3 Oct 2023); Beneva and Canada Life announcements (Jan 2020); Insurance Business (Foresters and CPP).

Scale is the clearest durable investment advantage: the big three originate private assets peers cannot

Moat assessment by strategic group

Rated on the metrics in this deck: private credit and alternatives shares (scale), par and annuity in-force (switching costs), brand and bank distribution (intangibles). Network effects do not apply to investment portfolios and are rated Weak throughout.

Group	Scale economies	Switching costs	Intangible assets	Network effects
Big three	Strong: 19 to 38% private credit, own origination	Strong: large par and annuity in-force	Strong: global brands	Weak
iA, Desjardins, Beneva	Moderate: 15.5% private credit at iA	Moderate	Strong in Quebec	Weak
▸ Bank-owned (RBC, BMO)	**Moderate: RBC 19.4% private credit; BMO 2.8%**	**Weak: small par (C$51MM at RBC)**	**Strong: bank brand and branch distribution**	**Weak**
Mid-size	Weak: rely on public markets and equities	Moderate: Equitable par 42% of liabilities	Moderate	Weak
Niche and small	Weak: 0 to 22% private assets	Weak	Niche distribution (Primerica, CPP)	Weak

Source: slides 3, 8, 9 and 12. The ratings are assessments built on disclosed metrics, not disclosed figures.

For RBC Life: defend the clean credit book, fix the capital buffer, and explain the two concentrations

Durable advantages

- 99.9% investment-grade bonds; ECL 0.7 bp
- Discount curve at the peer median: reserves neither aggressive nor conservative
- Bank brand and distribution (intangible)

Structural vulnerabilities

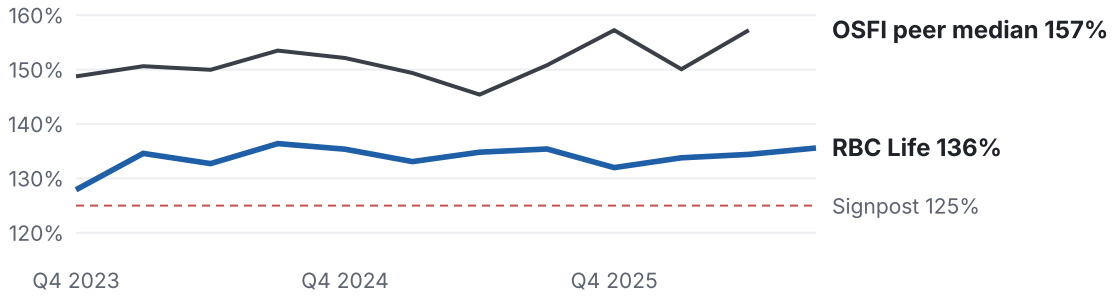

- LICAT 132%, third-lowest; 27 points under median
- Repos 14.1% of portfolio; Energy 37.6% of corporates
- No sensitivities published; par curve 177 bp under DSIR

Signposts to watch

- LICAT ratio below 125%
- Repos above 15% of portfolio or Energy above 40% of corporates
- 30y premium more than 50 bp above the peer median (+35 bp at YE2025)

Trajectory: LICAT total ratio by quarter, RBC Life against the OSFI peer median

RBC Life's LICAT ratio has held at 132 to 136% since fiscal 2024 (135.6% at fiscal Q3 2026), so the capital gap to peers is structural, not cyclical. Its 30y premium lead over the median narrowed from +35 bp at year end 2025 to +17 bp at Q3 2026.

Source: synthesis of slides 2 to 19; LICAT history from OSFI LCQ (one entity per insurer, fiscal quarters; RBC Life's fiscal Q3 2026 ends July 2026). Quantified signposts are proposals for monitoring, not targets set by RBC Life.

Method, coverage and caveats

Discount curves

Most illiquid curve (OSFI LF2 collects only that bucket); premiums for RBC Life and annual-report insurers measured over the median OSFI risk-free curve. 2023Q1 excluded (unit errors).

Par

Dividend scale interest rate used as the par discount rate; ivari, Wawanesa Life and Beneva publish none.

Portfolio composition

General account only; par excluded only for Canada Life and Assumption Life (the only peers that split it). Beneva includes P&C. Level 1 assigned by asset class.

Investment risk

LICAT market and credit capital cover non-par business only, legal entity. Big-three sensitivities are group-wide (Canada Life = Great-West Lifeco incl. Empower). Liquidity weights are illustrative.

Gaps

Humania and UV publish no curve. Desjardins publishes no portfolio or capital ratio. Canada Protection Plan sits in Foresters. RBC's forward-rate reading and Energy coding are unconfirmed.

Reproducibility

All figures re-run on 28 Oct 2026 from the scripts in the repository; outputs match the earlier dashboards exactly.

Code and data: abiddobani/InsuranceCompanies, analysis/discount_curves, analysis/portfolio_composition, analysis/investment_risk, analysis/summary_deck.
